REPORT.

TO THE RIGHT HONOURABLE

LORD PENTLAND,

His Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, *July* 5, 1910.

MY LORD,

MY predecessor in office, Sir STAIR AGNEW, K.C.B., had the honour in 1909, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to your Lordship, as His Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1908, along with the usual Explanation and Commentary.

At the same time the Forty-fourth Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1908).

I have the honour to be,

MY LORD,

Your most obedient Servant,

J. PATTEN MACDOUGALL,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY JAMES CRAUFURD DUNLOP, M.D., F.R.C.P. (EDIN.).

SIR,

I have the honour to submit the Detailed Report regarding the Births, Deaths, and Marriages registered in Scotland during the year ending 31st December 1908.*

Among the more noteworthy features of the Scottish vital statistics of the year are the lowness of the three principal rates, the birth-rate, the marriage-rate, and the death-rate. The birth-rate is slightly above that of 1907, but is lower than those of all previous years since the institution of national registration, and that is since 1855. The marriage-rate is lower than those of all previous years with the exception of five, those of 1858, 1879, 1886, 1887, and 1888. The death-rate is lower than the Scottish death-rates of all previous years with the exception of those of 1905 and 1906. The infantile mortality rate of the year was comparatively high; it was higher than the corresponding rates of the preceding three years, and more than the mean of the corresponding rates of the preceding five years. Among causes of death found to be more than usually prevalent during the year there were cerebro-spinal meningitis and measles; a severe epidemic of the former existed in 1907, and that epidemic continued into the first half of the year now under review. Among causes of death which were less than usually prevalent were enteric fever and tubercle, the death-rates of both being the lowest from those causes yet reported.

In an Appendix to this Report (page 1) there is given a statistical study of the fall of the national birth-rate. Mr. Alexander M'Kinlay, of this Department, by the use of a method for making allowance for the varying age constitution of the female married population, has deduced some interesting facts. He demonstrates clearly that the observed fall of the legitimate birth-rate is not entirely due to the greater average age at marriage in recent as compared with earlier years, but that it must be partly due to other causes. He gives a chart showing the variations of the legitimate birth-rate from a standard rate of all years since 1855.

* The Detailed Annual Report is founded on information abstracted directly from the Duplicate Registers of Births, Deaths, and Marriages, which, after collation and examination, are transmitted to this Office by the District Examiners during the course of the year following that to which they are applicable. The abstracting of the various details cannot be completed, and the compilation of the Statistical Tables therefrom commenced, until the expiration of twelve months after the Registers are closed. The Report cannot therefore be issued sooner than eighteen months after the end of the year with which it deals.

POPULATION.

The population of Scotland as enumerated on 31st March, 1901, was 4,472,103, of whom 2,173,755 were male and 2,298,348 female. The population at the time of the previous Census, 5th April, 1891, was 4,025,647, of whom 1,942,717 were male and 2,082,930 female. On the assumption that the rates of increase of the male population and of the female population which occurred between those two Censuses have continued, it is estimated that the population of Scotland in the middle of the year now under review, 1908, was 4,826,587, of whom 2,358,258 were male and 2,468,329 female. Compared with the estimated population at the middle of the year 1907, that of 1908 is 50,524 more, the estimated number of males being 26,351 more, and that of females being 24,173 more.

Scotland, for the purposes of these reports, is divided into five groups of Registration Districts. The group of Principal Town Districts consists of those towns which at the time of the 1901 Census had populations of more than 30,000; the population of this group is estimated to have been 2,215,857 at the middle of 1908, the male population being estimated at 1,073,004, and the female at 1,142,853. The group of Large Town Districts consists of those Registration Districts containing towns which at the time of the last Census had populations of between 10,000 and 30,000; the population of this group at the middle of 1908 is estimated to have been 609,099, of whom 299,510 were male and 309,589 female. The group of Small Town Districts consists of those Registration Districts containing towns which at the time of the last Census had populations of between 2000 and 10,000; the population of this group of districts at the middle of 1908 is estimated to have been 973,419, of whom 478,642 were male and 494,777 female. The group of Mainland-Rural Districts consists of the Mainland Registration Districts, and portions of registration districts, which are not included in the above urban groups; the population of this group is estimated to have been 916,183 at the middle of 1908, the male population being 453,861, and the female population 462,322. The group of Insular-Rural Districts consists of those registration districts of the islands which

TABLE I.—Population of Scotland, in its Five Groups of Districts, by the Censuses of 1891 and 1901, and estimated to the middle of 1908.

Five Groups of Districts.	Census 1891.			Census 1901.			Estimated to 30th June 1908.		
	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.	Males.	Females.	Both Sexes.
Principal Town	807,574	880,274	1,687,848	950,044	1,022,178	1,972,222	1,073,004	1,142,853	2,215,857
Large Town	236,817	252,592	489,409	273,746	286,553	560,299	299,510	309,589	609,099
Small Town	381,678	409,350	791,028	438,900	460,403	899,303	478,642	494,777	973,419
Mainland-Rural	458,998	474,971	933,969	456,013	467,597	923,610	453,861	462,322	916,183
Insular-Rural	57,650	65,743	123,393	55,052	61,617	116,669	53,241	58,788	112,029
Scotland	1,942,717	2,082,930	4,025,647	2,173,755	2,298,348	4,472,103	2,358,258	2,468,329	4,826,587

are not included in the above town districts; the population of this group is estimated to have been 112,029 in the middle of 1908, the male population being 53,241, and the female 58,788. Compared with the estimated populations of the previous year, 1907, that of the Principal Town Districts is 37,821 more, of the Large Town Districts 6300 more, and of the Small Town Districts 9883 more; but that of the Mainland-Rural Districts is 2851 less, and of the Insular-Rural Districts 629 less. Part of the increase of the estimated population of the Principal Town Districts, and part of the decrease of that of the Mainland-Rural Districts, is due to an alteration of the municipal boundaries of Dundee.

BIRTHS.

The births of 131,362 living children were registered in Scotland during the year 1908. These births are 2522 more than those registered in the previous year, but are 315 fewer than the average number registered during the preceding five years, and 222 fewer than the average number registered during the preceding ten years. The births of the year, though more than those of 1907, are fewer than those of each of the years 1900 to 1906. (*Table 1.*)

Of the total births of the year, 59,735, or 45·5 per cent., were registered in the Principal Town Districts; 18,644, or 14·2 per cent., in the Large Town Districts; 28,378, or 21·6 per cent., in the Small Town Districts; 22,417, or 17·0 per cent., in the Mainland-Rural Districts; and 2188, or 1·7 per cent., in the Insular-Rural Districts. Compared with the corresponding births of the previous year, those of the Principal Town Districts are 441 more, of the Large Town Districts 298 more, of the Small Town Districts 1442 more, and those of the Mainland-Rural Districts 371 more, but those of the Insular-Rural Districts are 30 fewer. (*Table 2.*)

The birth-rate of the year per thousand of the estimated population was 27·22, a rate which is 0·24 more than that of the previous year, 1907, but 0·94 less than the mean of the birth-rates of the five preceding years, 1903 to 1907, and 1·66 less than the mean of the

---

TABLE II.—Birth-rate in Scotland and its Groups of Registration Districts in 1908.

GROUPS OF DISTRICTS.	Estimated Number of Women aged 15–45.	Births.	Birth-rate per 1000 of Population.		Birth-rate per 1000 Women aged 15–45.	
			Rate.	Relative Quantity, Scotland being=100.	Rate.	Relative Quantity, Scotland being=100.
SCOTLAND .	1,162,541	131,362	27·22	100	113·0	100
Principal Town .	571,856	59,735	26·96	99·0	104·5	92·5
Large Town .	144,538	18,644	30·61	112·5	129·0	114·2
Small Town .	223,166	28,378	29·15	107·1	127·2	112·6
Mainland-Rural	198,826	22,417	24·47	89·9	112·7	99·7
Insular-Rural .	24,155	2,188	19·53	71·7	90·6	80·2

birth-rates of the preceding ten years, 1898 to 1907. The Scottish birth-rate of 1908 is less than that of all previous years with the exception of that of 1907. From 1856 to 1882 the national birth-rate ranged between 33 and 35·7 per thousand, from 1883 to 1900 it ranged between 29·6 and 33·7, since 1901 it has been below 29·5, in 1904 falling for the first time below 29, in 1906 for the first time below 28, and in 1907 for the first time below 27. (*Table 1.*)

The national birth-rate of the year expressed as per thousand of the estimated number of women of child-bearing age, 15 to 45, amounted to 113·0, a rate which is 1·1 more than that of the previous year, but is 3·7 less than the mean of the corresponding rates of the preceding five years.

The birth-rate per thousand of the estimated population in the Principal Town Districts was 26·96, in the Large Town Districts 30·61, in the Small Town Districts 29·15, in the Mainland-Rural Districts 24·47, and in the Insular-Rural Districts 19·53. Compared with the corresponding rates of the previous year, the birth-rate of the Principal Town Districts is 0·26 less, and that of the Insular-Rural Districts 0·16 less; but that of the Large Town Districts is 0·18 more, of the Small Town Districts 1·19 more, and of the Mainland-Rural Districts 0·48 more. The birth-rates of the Principal Town Districts and of the Insular-Rural Districts are the lowest recorded for those groups of districts. (*Table 3.*)

The birth-rate per thousand of the estimated number of child-bearing women in the Principal Town Districts was 104·5, in the Large Town Districts 129·0, in the Small Town Districts 127·2, in the Mainland-Rural Districts 112·7, and in the Insular-Rural Districts 90·6. This rate of the Principal Town Districts is 1·1 less than the corresponding rate of the previous year, and that of the Insular-Rural Districts 0·6 less; but that of the Large Town Districts is 1·3 more, of the Small Town Districts 5·9 more, and of the Mainland-Rural Districts 2·2 more.

The birth-rate per thousand of the estimated population in the divisions of the counties ranged from 29·87 in the South-Western, to 19·78 in the Northern. In the West-Midland it was 27·41, in the East-Midland 25·96, in the North-Eastern 25·72, in the South-Eastern 25·27, in the Southern 22·63, and in the North-Western 20·83. The birth-rates of the Northern and West-Midland Divisions are less than those of the previous year, but the birth-rates of the remaining six divisions are more than those of that year. (*Table 5.*)

TABLE III.—Births, 1908. Number of Legitimate, Illegitimate, and Total Births in Scotla and its Five Groups of Districts, distinguishing the Sexes; also the number of Tw and Triplet Births.

Groups of Districts.	Total Births.			Legitimate Births.			Illegitimate Births.			Twin Births.	Triplet Births.

Mainland-Rural .	11547	10870	22417	10532	9902	20434	1015	968	1983	294	3
Insular-Rural .	1172	1016	2188	1106	978	2084	66	38	104	31	–
Scotland . .	66826	64536	131362	62142	60109	122251	4684	4427	9111	1675	15

The birth-rate in the counties ranged from 33·52 in Linlithgow, 33·00 in Dumbarton, 30·68 in Lanark, 30·27 in Fife, and 30·10 in Haddington, to 14·80 in Bute, 16·81 in Sutherland, 17·59 in Argyll, 18·10 in Orkney, and 19·86 in Berwick. In five counties the birth-rate of the year exceeded 30 per thousand, in six counties it was between 25 and 30 per thousand, in seventeen counties it was between 20 and 25 per thousand, and in five counties it was less than 20 per thousand. In the previous year, 1907, the birth-rates of three counties exceeded 30 per thousand, and those of six counties were less than 20 per thousand. (*Table 5.*)

The birth-rate of the year in the principal towns ranged from 37·28 in Coatbridge, 37·10 in Hamilton, 31·99 in Motherwell, and 30·31 in Greenock, to 21·41 in Edinburgh, 22·05 in Perth, 24·58 in Kilmarnock, and 24·97 in Aberdeen. In Govan it was 29·78, in Partick 29·08, in Leith 28·28, in Glasgow 27·81, in Dundee 27·42, in Paisley 26·23, and in Kirkcaldy 26·13. In nine of these towns the birth-rate of the year was higher than the national birth-rate, and in six it was lower. The birth-rates of Dundee, Paisley, Leith, Greenock, Coatbridge, Kirkcaldy, and Hamilton were higher than those of the previous year, but the birth-rates of the remaining eight principal towns were lower in this than in that year. In four of these towns the birth-rate of the year exceeded 30 per thousand, in seven it was between 25 and 30, and in four between 20 and 25; in the previous year five of these towns had a birth-rate of over 30, and three one of under 25. (*Table 4.*)

Of the total children whose births were registered during the year, 66,826 were male and 64,536 female. The birth-rate of male children per thousand of the estimated male population was 28·34, and the female birth-rate per thousand of the estimated female population 26·15. The former rate is 0·08 more than that of the previous year, and the latter 0·40 more. (*Table 7.*)

The ratio of male to female children registered during the year was 103·5 to 100. In the previous year this ratio was 104·7 to 100. In the groups of registration districts the number of male children to each 100 female children ranged from 115·4 in the Insular-Rural

---

TABLE IV.—Births, 1908. Birth-rate per 1000 of Population; Percentage of Illegitimate to the Total Births; Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; and Proportion of Mothers who bore Twins and Triplets; in Scotland and its Five Groups of Districts, in 1908.

GROUPS OF DISTRICTS.	Births per 1000 of Population.	Percentage of Illegit. to Total Births.	Proportion of Males to every 100 Females in the			Proportion of MOTHERS who bore TWINS. — One in every	Proportion of MOTHERS who bore TRIPLETS. — One in every
			Total Births.	Legitimate Births.	Illegit. Births.

Districts, to 101·7 in the Large Town Districts. In the Small Town Districts this number was 103·7, in the Mainland-Rural Districts 106·2, and in the Principal Town Districts 102·6.

Of the 131,362 children registered during the year, 122,251 were legitimate, and 9111 illegitimate. The former are 2202 more than in the previous year; the latter are 320 more. The legitimate birth-rate per thousand married women of child-bearing age, 15 to 45, was 250·4, and the illegitimate birth-rate per thousand unmarried and widowed women of child-bearing age 13·5. The former rate is 2·1 more than the corresponding rate of the previous year, and the latter 0·3 more. The legitimate birth-rate of the year in the counties ranged from 305·5 in Dumbarton, 303·3 in Haddington, and 297·4 in Linlithgow, to 171·9 in Bute, 206·9 in Roxburgh, 210·9 in Berwick, 213·0 in Kinross, and 214·6 in Edinburgh. In the principal towns this rate ranged from 307·3 in Coatbridge and Hamilton, and 271·2 in Greenock, to 188·3 in Edinburgh, 203·0 in Kilmarnock, 212·4 in Aberdeen, and 212·5 in Perth. The illegitimate birth-rate per thousand unmarried and widowed women of child-bearing age in the counties ranged from 27·9 in Wigtown, 26·2 in Banff, 22·9 in Aberdeen, and 20·1 in Elgin, to 5·0 in Shetland, 5·5 in Bute, and 7·4 in Clackmannan. (*Table 6.*)

The illegitimate children registered during the year amounted to 6·94 per cent. of the total children registered. This rate is 0·12 more than that of the previous year, 0·18 more than the mean of the corresponding rates of the previous five years, and 0·33 more than the mean of the corresponding rates of the previous ten years. The number of illegitimate children registered during the year is 320 more than in the previous year, 214 more than the average number registered during the previous five years, and 408 more than the average number registered during the previous ten years. Thus the rise of this rate, as compared with the mean of the rates of the preceding five and ten years, though partly due to the diminution of the total births, is also partly due to an actual increase of illegitimate births. (*Table 1.*)

The illegitimate rate per hundred total births of the year ranged from 8·85 in the Mainland-Rural Districts to 4·75 in the Insular-Rural Districts. In the Principal Town Districts it was 7·09, in the Small Town Districts 6·36, and in the Large Town Districts 5·28. In the divisions of the counties this rate ranged from 12·26 in the North-Eastern, to 4·65 in the West-Midland. In the Southern it was 11·97, in the Northern 7·67, in the South-Eastern 7·24, in the East-Midland 6·81, in the North-Western 6·29, and in the South-Western 5·89. In the counties this rate ranged from 15·77 in Wigtown, 13·66 in Nairn, 12·73 in Elgin, 12·61 in Banff, and 12·39 in Aberdeen, to 3·91 in Dumbarton, 3·94 in Shetland, 4·33 in Stirling, 4·60 in Renfrew, 4·61 in Fife, and 4·64 in Linlithgow. In the previous year the three counties in which this rate was highest were Elgin, Wigtown, and Aberdeen, and the three in which it was lowest were Shetland, Dumbarton, and Ross and Cromarty. In eleven counties this rate in 1908 exceeded 10 per cent., in sixteen counties it was between 5 and 10 per cent., in six counties it was less than 5 per cent. In the previous year it exceeded 10 per cent. in eight counties, and was less than 5 per cent. in seven counties. (*Table 5.*)

In the principal towns the illegitimate rate of the year ranged from 9·53 in Edinburgh, 9·08 in Aberdeen, 9·06 in Dundee, and 8·63 in Perth, to 2·89 in Motherwell, 3·47 in Partick, 4·11 in Govan, 4·58 in Hamilton, and 4·68 in Coatbridge. In Glasgow it was 7·42, in Kilmarnock 6·88, in Kirkcaldy 6·19, in Leith 5·09, in Greenock 5·01, and in Paisley 4·90. In the previous year the principal towns with the highest illegitimate rate were Aberdeen, Dundee, and Edinburgh, and the three with the lowest illegitimate rate were Motherwell, Coatbridge, and Govan. (*Table 4.*)

The average number of births registered daily throughout the year was 359, which is 6 more than in the previous year. This average ranged from 401 in June, and 395 in April, to 317 in November, and 332 in December. In May it was 378, in July 373, in March 361, in January 359, in February 351, in October 349, in September 347, and in August 344. In the previous year this average was highest in April, and lowest in September.

The birth-rate of the year 1908 in the United Kingdom was 26·3, in England and Wales 26·5, and in Ireland 23·3. The Scottish birth-rate of the year is 0·9 above that of the United Kingdom, 0·7 above that of England and Wales, and 3·9 above that of Ireland.

The following are the birth-rates of the year 1908 in some European countries:—Roumania 40·8, Servia 36·8, Hungary 36·3, Italy 33·4, Spain 33·2, Prussia 32·8, Holland 29·7, Denmark 28·3, Switzerland 28·0, Norway 26·2, Sweden 25·7, and France 20·2.

MARRIAGES.

Marriages registered in Scotland during the year 1908 numbered 31,606. They are 1692 fewer than those registered in the previous year, 860 fewer than the average number registered annually during the previous five years, and 711 fewer than the average number registered annually during the previous ten years. Of the 31,606 marriages, 16,786, or 53·1 per cent., were registered in the Principal Town Districts; 6038, or 19·1 per cent., in the Small Town Districts; 4275, or 13·5 per cent., in the Mainland-Rural Districts; 4156, or 13·2 per cent., in the Large Town Districts; and 351, or 1·1 per cent., in the Insular-Rural Districts. Compared with the numbers of marriages registered in these groups of registration districts in the previous year, that of the Principal Town Districts is 1168 less, of the Large Town Districts 227 less, of the Small Town Districts 173 less, and of the Mainland-Rural Districts 131 less; but that of the Insular-Rural Districts is 7 more. (*Tables 1 and 2.*)

The national marriage-rate of the year was 6·55 per thousand of the estimated population, a rate which is 0·42 less than that of the previous year, 0·39 less than the mean of the marriage-rates of the preceding five years, and 0·54 less than the mean of the marriage-rates of the preceding ten years. Since 1855 there have been only five lower Scottish annual marriage-rates recorded, those being the rates of 1858 (6·49), 1879 (6·42), 1886 (6·31), 1887 (6·35), and 1888 (6·42). (*Table 1.*)

The marriage-rate of the year in the groups of registration districts ranged from 7·58 in the Principal Town Districts, to 3·13 in the Insular-Rural Districts. In the Large Town Districts it was 6·82, in

the Small Town Districts 6·20, and in the Mainland-Rural Districts 4·67. Compared with the marriage-rates of the previous year, that of the Principal Town Districts is 0·66 less, of the Large Town Districts 0·45 less, of the Small Town Districts 0·25 less, and of the Mainland-Rural Districts 0·12 less, but that of the Insular-Rural Districts is 0·08 more. (*Table 3.*)

In the divisions of the counties the marriage-rate of the year ranged from 7·39 in the South-Eastern, to 4·08 in the Northern. In the South-Western it was 6·94, in the East-Midland 6·65, in the Southern 6·10, in the North-Eastern 5·94, in the West-Midland 5·31, and in the North-Western 4·20. Compared with the corresponding marriage-rates of the previous year, each of these, with the exception of that of the North-Western, shows a decrease. (*Table 5.*)

In the counties the marriage-rate of the year ranged from 7·87 in Edinburgh, 7·30 in Lanark, 7·16 in Selkirk, and 7·08 in Kinross, to 2·27 in Sutherland, 3·54 in Argyll, 3·85 in Caithness, and 3·95 in Nairn. In four counties the marriage-rate of the year was more than 7 per thousand, in ten counties it was between 6 and 7 per thousand, in eight counties it was between 5 and 6 per thousand, in seven counties it was between 4 and 5 per thousand, and in four counties it was less than 4 per thousand. The counties which in the previous year, 1907, had the highest marriage-rates were Edinburgh, Lanark, Selkirk, and Forfar, and those with the lowest marriage-rates Sutherland, Bute, Argyll, and Ross and Cromarty. (*Table 5.*)

In the principal towns the marriage-rate of the year ranged from 8·54 in Edinburgh, 8·24 in Perth, and 8·19 in Glasgow, to 4·85 in Partick, 5·44 in Govan, and 5·46 in Motherwell. In Dundee the marriage-rate of the year was 7·64, in Hamilton 7·36, in Aberdeen 7·28, in Kirkcaldy 7·24, in Greenock 6·91, in Paisley 6·75, in Leith 6·39, in Kilmarnock 6·38, and in Coatbridge 6·21. With the exception of those of Greenock and Hamilton, these marriage-rates are all less than those of the previous year. (*Table 4.*)

Marriages between bachelors and spinsters numbered 28,233; they constituted 89·39 per cent. of the total marriages of the year, and are 1451 fewer than in the previous year. Marriages between bachelors and widows numbered 752; they constituted 2·38 per cent. of the total marriages of the year, and are 53 fewer than in the previous year. Marriages between widowers and spinsters numbered 1962; they constituted 6·21 per cent. of the total, and are 80 fewer than in the previous year. Marriages between widowers and widows numbered 638; they constituted 2·02 per cent. of the total, and are 97 fewer than in the previous year. (*Tables 14 and 15.*)

The average age of all persons marrying during the year was 27·8 years, that of all males being 29·1, and of all females 26·4. In the previous year the average age of all persons marrying was 27·7, of all males marrying 29·0, and of all females 26·3. (*Table 11.*)

The average age of men marrying in the Principal Town Districts was 29·3, which is 0·2 more than in the previous year; in the Large Town Districts 28·4, which is 0·1 more than in the previous year; in the Small Town Districts 28·6, which is the same as in the previous year; in the Mainland-Rural Districts 29·5, which is 0·1 more than in the previous year; and in the Insular-Rural Districts 33·2, which is 0·6 more than in the previous year. (*Table 11.*)

The average age of women marrying during the year in the Principal Town Districts was 26·6, which is 0·1 more than in the previous year; in the Large Town Districts 25·9, which is the same as in the previous year; in the Small Town Districts 26·0, which is 0·1 less than in the previous year; in the Mainland-Rural Districts 26·5, which is the same as in the previous year; and in the Insular-Rural Districts 28·5, which is 0·3 more than in the previous year. (*Table 11.*)

The average age of bachelors marrying during the year was 27·8, of those marrying spinsters 27·6, and of those marrying widows 34·3; the first and second of these averages are both 0·1 more than in the previous year, and the last-named is 0·2 more. The average age of widowers marrying during the year was 43·6, of those marrying spinsters 42·5, and of those marrying widows 47·3; the first of these is 0·6 more than in the previous year, and the second is 1·1 more, but the third is 0·1 less. (*Pp. 32–35.*)

The average age of spinsters marrying during the year was 25·8, of those marrying bachelors 25·3, and of those marrying widowers 34·1; the first and second of these averages are both 0·1 more than in the previous year, and the last-named is 0·8 more than in the previous year. The average age of widows marrying during the year was 38·6, of those marrying bachelors 35·3, and of those marrying widowers 42·4; the first of these is 0·4 less than in the previous year, the second 0·2 less, and the third 0·5 less. (*Pp. 32–35.*)

The youngest bachelors married during the year were one aged 16, 21 aged 17, 155 aged 18, and 523 aged 19, all of whom married spinsters, and 4 aged 19 who married widows. The oldest bachelors married during the year were seven aged between 65 and 70, two aged between 70 and 75, and one aged over 80, all of whom married spinsters; 15 aged between 55 and 60, and six aged between 60 and 65, who married widows. The youngest widowers married during the year were one aged 20, and 20 aged between 21 and 25, all of whom married spinsters; and the oldest widowers married during the year were 17 aged between 70 and 80, and three of over 80, all of whom married spinsters; 14 aged between 70 and 80, and one of over 80, all of whom married widows. (*Pp. 32–35.*)

The youngest spinsters married during the year were seven aged 15, 49 aged 16, 352 aged 17, and 1022 aged 18, all of whom married bachelors; and one aged 17, 11 aged 18, and 29 aged 19, all of whom married widowers. The oldest spinsters married during the year were four aged between 60 and 70, who married bachelors, and ten of similar age who married widowers. The youngest widows married during the year were three aged 20, who married bachelors, and one of the same age who married a widower. (*Pp. 32–35.*)

The tables on pages 30 to 35 of this Report are prepared to show the relative ages of the brides and bridegrooms of the year. It may there be seen, as is constantly the case, that the vast majority of marriages are between men and women of similar age, but it may also be seen that there have been marriages during the year in which there were wide differences between the ages of the spouses. The following are some of those marriages in which the difference of age was great:—13 bachelors of over 40 married spinsters of 19 or less, three bachelors of 19 or less married spinsters of over 30; 18 widowers of between 30 and 40, four of between 40 and 50, and three of

between 50 and 60, all married spinsters of 19 or less; two widowers of over 70 married widows of under 50. (*Pp. 30–35.*)

Of the 31,606 marriages registered during the year under review, 29,360, or 92·89 per cent., were regular and celebrated according to the rites of one or other of the churches, while 2246, or 7·11 per cent., were irregular. Both the actual number of irregular marriages and their ratio to the total marriages of the year are the highest yet recorded in these reports, that is, since 1855. The number is 22 more than in the previous year, 274 more than the average number of such marriages registered during the preceding five years, and 326 more than the average number registered during the preceding ten years. The percentage these marriages form of the total marriages of the year is 0·43 above that of the previous year, 1·04 above the mean of the corresponding percentages of the previous five years, and 1·17 above that of the preceding ten years. In the early years of registration, from 1855 to 1870, irregular marriages numbered less than 100 annually; in 1871 for the first time they exceeded 100, in 1883 they for the first time numbered more than 500, in 1890 for the first time more than 1000, in 1897 for the first time more than 1500, and in 1902 for the first time more than 2000. Of the irregular marriages, 2244 were registered on the authority of warrants by the Sheriff in terms of Lord Brougham's Act, 19 and 20 Vict., c. 96, and two were registered under the provisions of the 48th and 49th Sections of the Registration Act, 17 and 18 Vict., c. 80, upon the authority of extract decrees of declarator. In the counties, irregular marriages were relatively most numerous in Edinburgh, 14·48 per cent. of the total marriages, and in Lanark, 12·12 per cent. In nine counties there were no irregular marriages. In the principal towns irregular marriages were relatively most numerous in Edinburgh, 19·78 per cent., and in Glasgow, 17·75 per cent., and relatively least numerous in Kirkcaldy, 0·34 per cent., and Paisley, 0·66 per cent. (*Tables 8, 9, and 10.*)

Marriages according to the rites of the Established Church of Scotland numbered 14,238, and constituted 45·05 per cent. of the total. They are 878 fewer than in the previous year, and the percentage

---

TABLE V.—Marriages, 1908. Number of Marriages contracted in Scotland and its Five Groups of Districts according to the Rites of the several Religious Denominations, and their Proportion to the Total Marriages in each Group.

	Religious Denominations.	Number of Marriages.						Proportion in every 100 Marriages.					
		Scotland.	Principal Town.	Large Town.	Small Town.	Mainland-Rural.	Insular-Rural.	Scotland.	Principal Town.	Large Town.	Small Town.	Mainland-Rural.	Insular-Rural.

they constitute of the total is 0·34 less. In the counties these marriages were relatively most numerous in Wigtown, 74·87 per cent., in Peebles, 72·86 per cent., in Kincardine, 69·31 per cent., in Haddington, 67·05 per cent., and in Kirkcudbright, 65·99 per cent., and they were relatively least numerous in Ross and Cromarty, 35·08 per cent., in Lanark, 35·68 per cent., and in Renfrew, 38·66 per cent. In the principal towns Established Church marriages were relatively most numerous in Aberdeen, 49·19 per cent., in Kilmarnock, 49·00 per cent., in Govan, 48·89 per cent., and in Motherwell, 47·88 per cent. (*Tables 8, 9, and 10.*)

Marriages according to the rites of the United Free Church numbered 8271, and constituted 26·17 per cent. of the total. These marriages are 396 fewer than in the previous year, and the percentage they constituted of the total is 0·14 more. In the counties United Free Church marriages were relatively most numerous in Selkirk, 45·27 per cent., in Orkney, 44·12 per cent., and in Nairn, 40·00 per cent., and relatively least numerous in Peebles, 15·71 per cent., in Linlithgow, 18·71 per cent., and in Kincardine, 18·81 per cent. The principal towns in which these marriages were relatively most numerous are Kirkcaldy, 34·71 per cent., Kilmarnock, 33·33 per cent. Perth, 31·72 per cent., and Paisley, 30·66 per cent. (*Tables 8, 9, and 10.*)

Marriages according to the rites of the Roman Catholic Church numbered 3272, and constituted 10·35 per cent. of the total marriages of the year. They are 264 fewer than in the previous year, and the proportion they constituted of the total is 0·27 less. In the counties these marriages were relatively most numerous in Linlithgow, 17·55 per cent., in Dumbarton, 16·67 per cent., in Renfrew, 16·58 per cent., and in Lanark, 16·05 per cent. In nine counties there were no Roman Catholic marriages registered during the year. (*Tables 8, 9, and 10.*)

Marriages according to the rites of the Episcopal Church registered during the year numbered 934, and constituted 2·95 per cent. of the total marriages. They are 71 fewer than in the previous year, and the proportion they constituted of the total marriages of the year is 0·07 less. In the counties these marriages were relatively most numerous in Kincardine, 10·40 per cent., in Forfar, 6·96 per cent., in Edinburgh, 5·81 per cent., and in Roxburgh, 5·30 per cent. In three counties there were no marriages according to the rites of the Episcopal Church registered during the year. (*Tables 8, 9, and 10.*)

Marriages celebrated according to the rites of other denominations, including those celebrated according to the rites of the Free Church, numbered 2645, and constituted 8·37 per cent. of the total. These marriages are 105 fewer than in the previous year, and the percentage they constituted of the total is 0·11 more. In the counties these marriages were relatively most numerous in Ross and Cromarty, 33·77 per cent., in Shetland, 22·22 per cent., and in Sutherland, 18·75 per cent. (*Tables 8, 9, and 10.*)

Marriages registered during the year and celebrated according to the rites of one or other of the two principal Presbyterian Churches, the Established Church and the United Free Church, numbered 22,509, and constituted 71·22 per cent. of the total marriages registered during the year. They are 1274 fewer than in the previous year, and the percentage they constitute of the total is 0·20 less. (*Tables 9 and 10.*)

Of the 29,360 regular marriages registered during the year, 18,175, or 61·9 per cent., were preceded in respect of both parties by proclamation of banns; 10,420, or 35·5 per cent., were preceded in respect of both parties by publication of notice under the provisions of the Marriage Notice (Scotland) Act, 1878; and 765 by banns in respect of one party, and by public notice in respect of the other party. The first are 598 fewer than in the previous year, the second are 1074 fewer, and the third 42 fewer.

Of the 31,606 men who signed the marriage registers during the year, 31,284 did so by writing, and 322 by "mark." The latter number is 116 fewer than in the previous year, 186 less than the average number so signing during the previous five years, and 243 less than the average number during the previous ten years, and is the smallest number so signing in any year since the introduction of national registration of marriage. From 1855 to 1875 men signing by "mark" exceeded 2000 in each year, from 1876 to 1890 they numbered more than 1000 in each year, from 1891 to 1905 they numbered more than 500 in each year, but since 1906 have been fewer than 500, and in 1908 attained a minimum of 322 as stated. Signatures of men by "mark" amounted to 1·02 per cent. of the total, a rate which is 0·30 less than that of the previous year, 0·55 less than the mean of the rates of the preceding five years, 0·73 less than the mean of the rates of the preceding ten years, and is lowest of these rates recorded. (*Tables 14 and 15.*)

Of the 31,606 women who signed the marriage registers during the year, 507 did so by "mark," a number which is 75 less than that of the previous year, 173 less than the average number so signing during the previous five years, and 278 less than the average number so signing during the preceding ten years, and is the smallest number of such signatures by females in any year since the institution of national registration. Previous to 1876 women signing the marriage registers by "mark" numbered more than 4000 annually, from 1877 to 1887 they numbered between 2000 and 4000 annually, and from 1888 to 1897 more than 1000. Signatures by "mark" constituted 1·60 per cent. of the total female signatures of the year, a rate which is 0·15 less than that of the previous year, 0·50 less than the mean of the corresponding rates of the preceding five years, and 0·83 less than the mean of those rates of the preceding ten years, and is the smallest of those rates yet recorded in these reports. (*Tables 14 and 15.*)

The proportion of men signing the marriage registers by "mark" in the counties ranged from 3·23 per cent. in Inverness, 2·95 in Ross and Cromarty, 2·86 in Nairn, and 2·13 in Dumbarton, to 0 in 13 counties. The corresponding proportion of women ranged from 7·21 in Ross and Cromarty, 5·39 in Inverness, 2·96 in Shetland, and 2·68 in Lanark, to 0 in eight counties. In five counties all the entries in the marriage registers were signed by both spouses by writing. (*Table 16.*)

The average number of marriages registered daily throughout the year was 87, which is 4 fewer than in the previous year. The daily average number of marriages registered was greatest in June, 168, and least in May, 35. In January it was 124, in July 121, in December 104, in April 90, in September 75, in November 67, in March 65, in August 65, in October 61, and in February 60. In the previous

year the daily average number of marriages was also greatest in June and least in May.

The marriage-rate of the year in the United Kingdom was 7·13, in England and Wales 7·50, and in Ireland 5·20. Compared with the Scottish rate, that of the United Kingdom is 0·58 more, of England and Wales 0·95 more, but of Ireland 1·35 less.

The marriage-rates of the year in some European countries were :— Servia, 9·2 ; Roumania, 9·2 ; Hungary, 9·1 ; Italy, 8·3 ; France, 8·0 ; Prussia, 8·0 ; Switzerland, 7·8 ; Denmark, 7·4 ; Holland, 7·2 ; Spain, 7·1 ; Sweden, 6·1 ; and Norway, 6·1.

DEATHS.

Deaths registered in Scotland during the year 1908 numbered 77,838. They are 542 more than those registered during the previous year, 1548 more than the average number registered during the preceding five years, but 140 less than the average number registered during the preceding ten years. Of these deaths, 35,976, or 46·2 per cent., were registered in the Principal Town Districts ; 10,333, or 13·3 per cent., in the Large Town Districts ; 15,461, or 19·9 per cent., in the Small Town Districts ; 14,342, or 18·4 per cent., in the Mainland-Rural Districts ; and 1726, or 2·2 per cent., in the Insular-Rural Districts. (*Tables 1 and 5.*)

The Scottish death-rate of the year is 16·13 ; it is 0·06 less than that of the previous year, 0·18 less than the mean of the death-rates of the preceding five years, and 0·98 less than the mean of the death-rates of the preceding ten years. This death-rate is lower than the death-rates of all previous years since 1855, with the exception of those of 1905 and 1906, which were 15·94 and 16·00 respectively. (*Table 1.*)

The death-rate of the year in the groups of registration districts ranged from 16·96 in the Large Town Districts, to 15·41 in the Insular-Rural Districts. In the Principal Town Districts it was 16·24, in the Small Town Districts 15·88, and in the Mainland-Rural Districts 15·65. Compared with the corresponding death-rate of the previous year, that of the Principal Town Districts is 0·56 less, and

---

TABLE VI.—Showing Deaths and Death-rates in the Groups of Registration Districts in 1907 and 1908.

	1908.			1907.		
	Population.	Deaths.	Death-rate.	Population.	Deaths.	Death-rate.
Principal Town Districts,	2,215,857	35,976	16·24	2,178,036	36,599	16·80
Large Town Districts .	609,099	10,333	16·96	602,799	10,039	16·65
Small Town Districts, .	973,419	15,461	15·88	963,536	14,689	15·24
Mainland-Rural Districts,	916,183	14,342	15·65	919,034	14,147	15·39
Insular-Rural Districts .	112,029	1,726	15·41	112,658	1,822	16·17
SCOTLAND, . . .	4,826,587	77,838	16·13	4,776,063	77,296	16·18

that of the Insular-Rural Districts 0·76 less, but that of the Large Town Districts is 0·31 more, of the Small Town Districts 0·64 more, and of the Mainland-Rural Districts 0·26 more. (*Table 3.*)

The approximation of the death-rate of the Principal Town Districts to the level of that of the Mainland-Rural Districts is a matter previously referred to in these reports. A further approximation of these two death-rates is again found this year. Previous to 1875, the mean of the death-rates of each quinquennial period of the Principal Town Districts was more than 10 greater than the mean of the death-rates of the same periods of the Mainland-Rural Districts; in the quinquennial periods 1876 to 1880, and from 1881 to 1885, the differences between the corresponding means were between 7 and 8; in the period 1886 to 1890 the difference was 5·25; in the period 1891 to 1895 it was 4·66; in the period 1896 to 1900 it was 4·00; in the period 1901 to 1905 it was 2·79; in the year 1906 it was 1·48, in the year 1907 it was 1·41, and in the year now under review, 1908, it was only 0·59.

The death-rate of the year in the divisions of the counties ranged from 16·77 in the South-Western, to 14·75 in the North-Eastern. In the Northern it was 16·24, in the North-Western 16·17, in the Southern 16·13, in the East-Midland 16·10, in the West-Midland 15·63, and in the South-Eastern 15·41. The death-rates of the year of the East-Midland and South-Western Divisions are higher than those of the previous year, but the death-rates of the other divisions are all lower. (*Table 5.*)

The death-rates of the counties ranged from 11·41 in Peebles, 12·25 in Kincardine, 14·18 in Selkirk, and 14·24 in Kirkcudbright, to 18·19 in Wigtown, 17·49 in Nairn, 17·33 in Sutherland, and 17·22 in Lanark. In four counties the death-rate exceeded 17 per thousand, in eight counties it was between 16 and 17, in eleven it was between 15 and 16, in eight it was between 14 and 15, and in two it was less than 13. In the previous year the two counties with the lowest

---

TABLE VIA.—Comparing Death-rates per 1000 in the Principal Town and the Mainland-Rural Districts of Scotland, 1855–1908.

PERIOD.	DEATH-RATE.		
	In Principal Town Districts.	In Mainland-Rural Districts.	Excess of Principal Town Rate over Mainland-Rural Rate.
1855–60	27·41	16·45	10·96
1861–65	28·54	17·27	11·27
1866–70	28·02	17·09	10·93
1871–75	28·00	17·48	10·52
1876–80	24·26	16·88	7·38
1881–85	23·01	15·79	7·22
1886–90	21·17	15·92	5·25
1891–95	21·19	16·53	4·66
1896–1900	19·97	15·97	4·00
1901–05	18·13	15·34	2·79
1906	16·57	15·09	1·48
1907	16·80	15·39	1·41
1908	16·24	15·65	0·59

death-rates were Peebles, 11·37, and Kincardine, 12·57, and the two counties with the highest death-rates were Caithness, 18·34, and Sutherland, 17·91. (*Table 5.*)

The death-rate of the principal towns ranged from 10·89 in Partick, 12·21 in Motherwell, and 12·50 in Govan, to 20·11 in Coatbridge, 18·57 in Dundee, and 17·75 in Glasgow. In Hamilton it was 17·42, in Greenock 17·00, in Perth 16·82, in Paisley 15·43, in Leith 15·40, in Edinburgh 15·24, in Kilmarnock 15·04, in Aberdeen 14·02, and in Kirkcaldy 13·14. The death-rates of Coatbridge, Kilmarnock, Kirkcaldy, Hamilton, and Motherwell were higher in this than in the previous year, but those of the remaining ten principal towns were lower than in the previous year. A comparison of these death-rates with the means of the corresponding death-rates of the preceding ten years shows that, with the exception of the death-rates of Coatbridge and Hamilton, they were all less than those means. The death-rate of Motherwell is 4·0 less than that mean, of Partick 3·6 less, of Aberdeen 3·2 less, of Govan 3·2 less, of Paisley 2·9 less, of Edinburgh 2·4 less, of Glasgow 2·0 less, of Greenock 1·9 less, of Kilmarnock 1·8 less, of Perth 1·3 less, of Dundee 1·2 less, of Kirkcaldy 1·1 less, and of Leith 0·8 less; but that of Hamilton is 0·2 more, and that of Coatbridge 1·1 more. The death-rates of six of these towns were greater than the national death-rate, while those of nine were less. (*Table 21.*)

When the crude death-rates of the counties are made comparable by correction—that is, when they are adjusted to allow for the varying sex and age constitution of the populations—it is found that the highest corrected death-rates of the year are those of Renfrew, 19·24; Lanark, 18·33; Forfar, 16·60; Edinburgh, 16·54; and Dumbarton, 16·44; and that the lowest corrected death-rates are those of Kincardine, 11·06; Peebles, 11·09; Orkney, 11·46; Shetland, 12·03; and Kinross, 12·34. The corrected death-rates of seven counties are equal to or more than the national death-rate, while those of twenty-six counties are less than that rate. (*Table 19.*)

The corrected death-rates of the principal towns range from 21·76 in Coatbridge, 19·66 in Glasgow, 19·57 in Dundee, and 18·28 in Hamilton, to 12·01 in Partick, 13·47 in Motherwell, 13·75 in Kirkcaldy, and 13·79 in Govan. In Greenock the corrected death-rate was 17·86, in Perth 16·88, in Leith 16·36, in Paisley 16·15, in Kilmarnock 15·95, in Edinburgh 15·88, and in Aberdeen 13·92. The corrected death-rates of eight of these towns are more than the national death-rate, and those of seven of these towns are less than that rate. (*Table 19.*)

Of the 77,838 persons whose deaths were registered during the year, 38,864 were male, and 38,974 female. The male death-rate per thousand of the estimated male population was 16·48, and the female death-rate per thousand of the estimated female population 15·79. The former is 0·08 more than that of the previous year, but the latter is 0·19 less. (*Table 18.*)

Of the males whose deaths were registered during the year, 13,832, or 35·59 per cent., were of less than five years old; 1029, or 2·65 per cent., were between five and ten years old; 1497, or 3·85 per cent., were between ten and twenty years old; 4364, or 11·23 per cent., were between twenty and forty years old; 7029, or 18·09 per cent., were between forty and sixty years old; 9026, or 23·22 per

cent., were between sixty and eighty years old; and 2084, or 5·36 per cent., were over eighty years old. By a comparison with the corresponding returns of the previous year, it is found that the only age group in which male deaths are more numerous is that of boys of less than five years old; they number 1366 more than in that year. Deaths of males between five and ten years old are 53 fewer than in the previous year; between ten and twenty, 108 fewer; between twenty and forty, 385 fewer; between forty and sixty, 109 fewer; between sixty and eighty, 69 fewer; and over eighty, 14 fewer. (*Tables 22 and 24.*)

Of the 38,974 females whose deaths were registered during the year, 11,611, or 29·79 per cent., were less than five years old; 1044, or 2·68 per cent., were between five and ten years old; 1528, or 3·92 per cent., were between ten and twenty years old; 4545, or 11·66 per cent., were between twenty and forty years old; 6402, or 16·43 per cent., were between forty and sixty years old; 10,328, or 26·50 per cent., were between sixty and eighty years old; and 3515, or 9·02 per cent., were over eighty. Compared with the returns of the previous year, deaths of females of less than five years old are 935 more, of between five and ten years old 99 fewer, of between ten and twenty years old 177 fewer, of between twenty and forty years old 327 fewer, of between forty and sixty years old 57 fewer, of between sixty and eighty years old 350 fewer, and of over eighty 7 fewer. Thus of the female deaths, as of the male deaths, the only age group which shows an increase over the corresponding return of the previous year is that of under five. (*Tables 22 and 24.*)

A comparison of the age distribution of both the male and female deaths of the year with the mean of the corresponding age distributions of the previous ten years shows that the proportion of the deaths, both male and female, under five years old and over sixty was relatively large, while those of the age periods between five and sixty were relatively small.

The death-rate per thousand of the estimated male population of under five years old was 47·51, and of the estimated female population of that age 40·85; that of the estimated male population between five and ten years old 3·80, and of the female 3·99; of the male population between ten and fifteen 2·30, and of the female 2·83; of the male between fifteen and twenty 3·61, and of the female 3·41; of the male between twenty and thirty 4·70, and of the female 4·68; of the male between thirty and forty, 7·69, and of the female 7·31; of the male between forty and fifty 12·29, and of the female 10·87; of the male population between fifty and sixty 25·36, and of the female 20·04; of the male population between sixty and seventy 49·12, and of the female 39·45; of the male population between seventy and eighty 91·90, and of the female 81·03; of the male population between eighty and ninety 182·68, and of the female 170·33. A comparison of the male death-rates of the age periods with the corresponding female death-rates shows that the former are higher than the latter, with the exception of those of the periods five to ten, and ten to fifteen. A comparison of these death-rates with those of the previous year shows that the male and female death-rates of under five are higher, but that those of all the remaining age periods, both male and female, are lower. (*Table 23.*)

A comparison of the male death-rates of the Principal Town Districts with those of the Mainland-Rural Districts shows that in the Principal Town Districts the male death-rates of age periods under fifteen, and from forty to eighty, are higher than the corresponding male death-rates in the Mainland-Rural Districts; while the male death-rates in the Principal Town Districts of age periods between fifteen and forty, and from eighty to ninety, are lower than in the Mainland-Rural Districts. The female death-rates in the Principal Town Districts are higher than those in the Mainland-Rural Districts in all age periods under twenty, and between thirty and eighty, but lower in the twenty to thirty and eighty to ninety age periods. (*Table 23.*)

The death-rate of the estimated male population of over seventy years of age for the year was 111·39, and of the female population of similar age 103·91. The former is 3·23 less than in the previous year, and the latter is 2·93 less. These rates are of some special interest, as they give an indication of the probable death-rate among those receiving old-age pensions. The death-rate of the male population of over seventy ranged from 127·87 in the Large Town Districts, to 104·72 in the Insular-Rural Districts. In the Principal Town Districts it was 116·28, in the Small Town Districts 118·68, and in the Mainland-Rural Districts 106·20. The corresponding female death-rate ranged from 109·04 in the Mainland-Rural Districts to 102·24 in the Principal Town Districts. In the Small Town Districts it was 108·36, in the Large Town Districts 105·48, and in the Insular-Rural Districts 102·35.

Deaths of children of less than one year old numbered 15,900; they are 1760 more than in the previous year, 1907, and 726 more than in 1906. The births of 131,362 living children were registered during the year, and thus the infantile mortality rate of the year is 121·0 per thousand births. This rate is 11·3 more than that of the previous year, it is higher than each of the corresponding rates of the preceding three years, it is 4·7 more than the mean of the rates of the preceding five years, but is 0·8 less than that of the rates of the preceding ten years. (*Tables 28 and 29.*)

The infantile mortality rate of the year ranged from 132·0 in the Principal Town Districts, to 67·6 in the Insular-Rural Districts. In the Large Town Districts it was 125·3, in the Small Town Districts 120·8, and in the Mainland-Rural Districts 93·8. Compared with the corresponding rates of the previous year, that of the Small Town Districts is 18·2 more, of the Large Town Districts 16·4 more, of the Mainland-Rural Districts 11·6 more, of the Principal Town Districts 6·8 more, and of the Insular-Rural Districts 4·0 more. Compared with the mean of the corresponding rates of the preceding five years, that of the Small Town Districts is 12·0 more, of the Large Town Districts 6·7 more, of the Mainland-Rural Districts 6·1 more, and of the Principal Town Districts 0·3 more, but that of the Insular-Rural Districts is 0·7 less. (*Table 29.*)

In the divisions of the counties the infantile mortality rate of the year ranged from 130·2 in the South-Western, to 71·1 in the Northern. In the East-Midland it was 119·1, in the South-Eastern 118·5, in the North-Eastern 115·6, in the Southern 100·0, in the West-Midland 109·1, and in the North-Western 90·4. In the

counties this rate ranged from 137·4 in Lanark, 132·7 in Forfar, 132·2 in Elgin, 127·9 in Banff, 127·7 in Linlithgow, and 121·2 in Stirling, to 53·7 in Shetland, 60·2 in Orkney, 65·8 in Argyll, 69·1 in Kirkcudbright, and 73·2 in Sutherland. In six counties this rate exceeded 120 per thousand births, in eight it was between 110 and 120, in five it was between 100 and 110, in seven it was between 90 and 100, and in seven it was less than 90. (*Table 28.*)

In the principal towns the infantile mortality rate ranged from 160·2 in Coatbridge, 157·5 in Hamilton, and 149·5 in Dundee, to 106·5 in Partick, 108·6 in Kirkcaldy, and 114·4 in Paisley. In Glasgow it was 137·2, in Aberdeen 129·4, in Govan 127·3, in Kilmarnock 127·2, in Leith 126·5, in Motherwell 125·8, in Edinburgh 122·0, in Greenock 118·1, and in Perth 117·3. The infantile mortality rates of Edinburgh, Dundee, Paisley, and Partick are less than those of the previous year, but the infantile mortality rates of the remaining eleven principal towns are higher in this than in the previous year. (*Table 28.*)

The infantile death-rate of male children per thousand male births was 133·2, and of female children per thousand female births, 108·5; the former is 14·2 more than in the previous year, and the latter 8·5 more. The male infantile mortality rate of the year ranged from 143·6 in the Principal Town Districts, to 74·2 in the Insular-Rural Districts. In the Large Town Districts it was 137·6, in the Small Town Districts 136·4, and in the Mainland-Rural Districts 104·3. The female infantile mortality rate of the year ranged from 120·1 in the Principal Town Districts, to 60·0 in the Insular-Rural Districts. In the Large Town Districts it was 112·8, in the Small Town Districts 104·7, and in the Mainland-Rural Districts 82·7.

The average age of all persons dying during the year was 36·91 years, which average is 1·1 less than that of the previous year, and 0·5 less than that of 1906, and ranged from 55·5 in the Insular-Rural Districts, to 32·7 in the Principal Town Districts. In the Mainland-Rural Districts it was 47·0, in the Small Town Districts 37·5, and in the Large Town Districts 33·8. The average age of those whose deaths were registered in the Principal Town Districts during the year is 0·1 less than in the previous year, in the Large Town Districts 2·3 less, in the Small Town Districts 2·3 less, and in the Mainland-Rural Districts 1·7 less, but in the Insular-Rural Districts it is 0·8 more.

The average age of males whose deaths were registered during the year was 34·5 years, and of females 39·3; the former is 1·2 less than in the previous year, the latter is 1·0 less. The average age at death of males during the year ranged from 50·9 in the Insular-Rural Districts, to 30·6 in the Principal Town Districts. In the Mainland-Rural Districts it was 44·0, in the Small Town Districts 34·7, and in the Large Town Districts 32·2; these averages are all less than those of the previous year, with the exception of that of the Insular-Rural Districts, which is the same as in that year. The average age at death of females dying during the year ranged from 59·6 in the Insular-Rural Districts, to 34·8 in the Principal Town Districts. In the Mainland-Rural Districts it was 49·9, in the Small Town Districts 40·2, and in the Large Town Districts 35·3, each of these averages being less than the corresponding average of the previous year,

with the exception of that of the Insular-Rural Districts, which is more.

Among the recorded deaths there were those of 21 reputed centenarians, of whom five were men and 16 women. In the previous year deaths of reputed centenarians numbered 17, three men and 14 women. Of this year's centenarians, six women and one man were stated to be 100 years old, six women and two men between 101 and 105 years old, three women and two men between 106 and 110 years old, and one woman, the widow of a crofter, was stated to be 112 years old.

The average daily number of deaths registered throughout the year was 213, which is 1 more than in the previous year. This average varied between 272 in January, and 172 in July. In February it was 268, in March 252, in April 242, in May 208, in November 207, in December 206, in June 193, in August 182, in September 179, and in October 175. In 1907 the greatest daily average was that of February, and the least that of August.

The death-rate of the year 1908 of the United Kingdom was 15·1, of England and Wales 14·7, and of Ireland 17·6. Compared with the Scottish death-rate, that of the United Kingdom is 1·0 less, that of England and Wales 1·4 less, but that of Ireland 1·5 more.

The following are the death-rates of the year 1908 in some European countries :—Roumania, 27·7 ; Hungary, 24·8 ; Servia, 23·7 ; Spain, 23·3 ; Italy, 22·6 ; France, 19·0 ; Prussia, 17·9 ; Switzerland, 16·2 ; Holland, 15·3 ; Sweden, 14·9 ; Denmark, 14·5 ; and Norway, 14·3.

CAUSES OF DEATH.

Of the 77,838 deaths registered during the year, 76,184, or 97·9 per cent., were certified as to the causes of death by a registered medical practitioner or by a procurator-fiscal, and 1654, or 2·1 per cent., were not so certified. The latter are 142 fewer than in the previous year, and 189 less than the average number of such deaths during the preceding five years. (*Table 40.*)

The proportion of deaths uncertified as to the cause varied during the year from 28·2 per cent. in the Insular-Rural Districts, to 0·6 per cent. in the Large Town Districts. In the Mainland-Rural Districts this proportion was 3·3 per cent., in the Principal Town Districts 1·3, and in the Small Town Districts 1·0. In the divisions of the counties this proportion varied from 20·7 per cent. in the North-Western, and 15·4 in the Northern, to 0·7 in the East-Midland, and 0·8 in the North-Eastern. In the West-Midland it was 2·1, in the South-Eastern 1·9, in the South-Western 1·0, and in the Southern 1·0. In the counties this rate varied from 22·3 in Ross and Cromarty, 22·1 in Shetland, 20·2 in Sutherland, 19·2 in Inverness, and 13·4 in Orkney, to 0 in Selkirk, and 0·2 in Clackmannan, Stirling, and Berwick. In the principal towns this rate varied from 3·3 in Paisley, 3·0 in Edinburgh, and 1·4 in Leith, to 0 in Perth and Motherwell, and 0·2 in Aberdeen, Coatbridge, and Kirkcaldy. (*Table 40.*)

The cause of death was specified, though not always certified, in 77,334 cases, while deaths the causes of which were not specified

by a medical practitioner, by a procurator-fiscal, or by a relative or other informant, numbered 504. These latter are 18 fewer than in the previous year, and 37 fewer than in 1906, but are 53 more than in 1905, and constitute 0·64 per cent. of the total deaths.

In an endeavour to make the information on which this section of the Report is founded as reliable as possible, letters of enquiry addressed to medical certifiers have been freely used in cases in which the diseases causing death were, for purposes of classification, insufficiently described. By means of these enquiries information was obtained which enabled several hundred deaths to be more properly classed. Among these letters of enquiry there were 110 referring to cases of intestinal and other obstruction, and the replies showed that 51 of them were cases of cancer; there were 60 referring to deaths certified as due to tumour, of them 46 were ascertained to be due to cancer; out of 35 cases certified as due to general paralysis, 13 were found to be due to diseases other than general paralysis of the insane; and of 35 cases where the certified cause of death was senility, although the persons dying had apparently not reached the ages associated with that condition, the incorrectness of the age was ascertained in 17 cases, and a more specific cause of death was ascertained in 14.

Of the 77,334 deaths registered during the year, and of which the cause was specified, 4233, or 5·5 per cent., were due to diseases of the nervous system, apoplexies excluded; 13,925, or 18·0 per cent., to diseases of the circulatory system, apoplexies included; 5871, or 7·6 per cent., to diseases of the respiratory system, pneumonias excluded; 4915, or 6·4 per cent., to diseases of the digestive system, diarrhœas excluded; 2748, or 3·6 per cent., to diseases of the urinary system; 220, or 0·3 per cent., to diseases of the generative system; 435, or 0·6 per cent., to diseases and accidents of parturition, puerperal septic infection excluded; and 3067, or 4·0 per cent., to violent causes. Compared with the returns of the previous year, deaths from diseases of the circulatory system are 548 more, from

TABLE VII.—Deaths from Small-pox in Scotland, 1855-1908.

YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.	YEAR.	Small-pox Deaths.
1855	1,309	1873	1,126	1891	–
1856	1,306	1874	1,246	1892	11
1857	845	1875	76	1893	68
1858	332	1876	39	1894	129
1859	682	1877	38	1895	47
1860	1,495	1878	4	1896	2
1861	766	1879	8	1897	10
1862	426	1880	10	1898	2
1863	1,648	1881	19	1899	1
1864	1,741	1882	3	1900	53
1865	383	1883	11	1901	278
1866	200	1884	14	1902	80
1867	100	1885	39	1903	41
1868	15	1886	24	1904	185
1869	64	1887	17	1905	4
1870	114	1888	3	1906	1
1871	1,442	1889	8	1907	1
1872	2,448	1890	–	1908	6

diseases of the digestive system 400 more, and from diseases of the nervous system 146 more; but those from diseases of the respiratory system are 128 fewer, from diseases of the urinary system 75 fewer, from violent causes 56 fewer, from diseases of the generative organs 18 fewer, and from diseases and accidents of pregnancy and parturition 16 fewer. (*Tables 31 and 34.*)

There were six deaths from small-pox registered during the year, all six being registered in Leith. In the previous year, 1907, there was only one such death, in 1906 there was also only one, in 1905 there were four. (*Tables 31 and 33.*)

"Fevers," including typhus, enteric, relapsing, cerebro-spinal, and ill-defined fevers, were the ascribed cause of 738 deaths during the year. These deaths are 1383 fewer than in the previous year, but 19 more than in 1906, 307 more than in 1905, 306 more than in 1904, and 155 more than in 1903. The large number of deaths included among the deaths from "fevers" in the previous year was due to the existence of an epidemic of cerebro-spinal meningitis, and it is to the same cause that the deaths from "fevers" are larger in this year than in the years 1903 to 1906, 445 out of the 738 deaths from "fevers" having been due to that cause. (*Table 31.*)

Deaths from typhus fever numbered 8; they are 6 fewer than in the previous year, and 11 fewer than the average number during the preceding five years, 1903 to 1907. (*Tables 31 and 35.*)

TABLE VIII.—Deaths from "Fevers" in Scotland in 1908, with the equivalent Death-rates therefrom.

FEVERS.	RURAL DISTRICTS.		TOWN DISTRICTS.	
	Deaths from each Fever.	Death-rate per 100,000 of the Population.	Deaths from each Fever.	Death-rate per 100,000 of the Population.

TABLE IX.—Monthly Deaths from "Fever" in Eight of the Principal Towns of Scotland during the Ten Years 1899–1908; specifying those from Typhus and from Enteric Fever.

MONTHS.	Total "Fever" Deaths.	Typhus.	Enteric.	MONTHS.	Total "Fever" Deaths.	Typhus.	Enteric.
January	294	10	181	July	264	10	147
February	365	18	168	August	287	6	187
March	363	14	139	September	317	9	232
April	349	10	131	October	304	10	237
May	276	9	98	November	260	9	193
June	229	8	101	December	246	15	178

Deaths from enteric fever numbered 282; they are 85 fewer than in the previous year, 138 fewer than the average number of such deaths during the five preceding years, and are fewer than those of all previous years. This is the first year in which deaths from enteric fever in Scotland have numbered fewer than 300. The death-rate from enteric fever for the year was 6 per 100,000, a rate which is 2 less than that of the previous year, 3 less than the mean of the corresponding rates of the preceding five years, and is the lowest Scottish death-rate from this cause recorded. This death-rate ranged from 5 in the Principal Town Districts, to 9 in the Large Town Districts. In the Small Town, Mainland-Rural, and Insular-Rural Districts this rate was 6 per 100,000. The death-rate from enteric fever in the principal towns ranged from 16 per 100,000 in Kilmarnock, 10 in Hamilton, and 8 in Glasgow, to 0 in Partick, 1 in Aberdeen and Govan, and 2 in Edinburgh, Dundee, and Coatbridge. Of those dying from enteric fever during the year, 80·07 per cent. were aged between fifteen and sixty, 14·24 per cent. between five and fifteen, 3·20 per cent. were less than five years old, and 2·49 per cent. were more than sixty years old. (*Tables 30–36.*)

Deaths from measles numbered 2503; they are 1350 more than in the previous year, and 1122 more than the average number during the five preceding years. The death-rate from this cause was 52 per 100,000, a rate which is 28 above that of the previous year, and 22 more than the mean of the corresponding death-rates of the preceding five years. This death-rate ranged from 71 in the Large Town Districts, to 15 in the Insular-Rural Districts. In the Principal Town Districts it was 62, in the Small Town Districts 51, and in the Mainland-Rural Districts 21. In the principal towns this rate ranged from 231 in Coatbridge, where deaths from measles constituted 11·5 per cent. of the total deaths, to 0 in Kirkcaldy, 8 in Dundee, and 14 in Perth. In Hamilton this death-rate was 123, in Glasgow 97, in Govan 52, and in Paisley 50. Of those dying from measles during the year, 92·89 per cent. were less than five years old, 5·87 per cent. between five and ten years old, and 1·24 per cent. more than ten years old. (*Tables 30–36.*)

Deaths from scarlet fever numbered 381; they are 148 more than in the previous year, 109 more than the average during the preceding five years, and more than in any year since 1903. The death-rate from this cause was 8 per 100,000, a rate which is 3 more than that of the previous year, and 2 more than the mean of the corresponding rates of the preceding five years. This rate in the Large Town Districts was 10, in the Principal Town Districts 9, in the Small Town Districts 7, in the Mainland-Rural Districts 5, and in the Insular-Rural Districts 3. In the principal towns this rate ranged from 21 in Dundee, and 11 in Glasgow and Paisley, to 0 in Govan and Perth, 1 in Greenock, and 2 in Motherwell. Of those dying from this disease, 59·1 per cent. were less than five years old, 28·9 per cent. between five and ten years old, and 4·5 per cent. between ten and fifteen years old. (*Tables 30–36.*)

Deaths from diphtheria, including those certified as due to croup, numbered 748; they are 19 more than in the previous year, but 7 less than the average number of such deaths during the preceding five years. The death-rate from this cause is 15 per 100,000, a rate which

is the same as that of the previous year, but 1 less than the mean of the corresponding rates of the preceding five years. This death-rate in the Large Town Districts was 20, in the Principal Town Districts 16, in the Small Town Districts 14, in the Mainland-Rural Districts 14, and in the Insular-Rural Districts 6. In the principal towns this death-rate ranged from 42 in Paisley, and 28 in Kirkcaldy and Motherwell, to 2 in Govan, 4 in Partick, and 7 in Edinburgh and in Leith. Of those dying from diphtheria and croup, 71·0 per cent. were less than five years old, and 22·3 per cent. were between five and ten years old. Of these 748 deaths, 695 were certified as due to diphtheria, and 53 as due to croup; the former are 21 more than in the previous year, and the latter 2 less. (*Tables 30–36.*)

Deaths from hooping-cough numbered 2144; they are 341 fewer than in the previous year, but 56 more than the average during the preceding five years. The death-rate from this cause was 45 per 100,000, a rate which is 7 less than that of the previous year, but is the same as the mean of the corresponding rates of the preceding five years. This rate ranged from 52 in the Principal Town Districts, to 15 in the Insular-Rural Districts. In the Large Town Districts it was 51, in the Small Town Districts 37, and in the Mainland-Rural Districts 34. In the principal towns this rate varied from 139 in Coatbridge, where these deaths constituted 6·9 per cent. of the total deaths, to 13 in Kirkcaldy, 29 in Kilmarnock, 32 in Paisley, and 33 in Edinburgh. In Motherwell this rate was 109, in Leith 67, and in Glasgow 62. Of those dying from hooping-cough, 95·5 per cent. were less than five years old, and 4·2 per cent. between five and ten years old. (*Tables 30–36.*)

Deaths from diarrhœas, including those registered as due to diarrhœa, epidemic diarrhœa, dysentery, enteritis, and gastro-enteritis, numbered 3081; they are 904 more than those of the previous year, and 157 more than the average number of the preceding five years. The death-rate from these causes was 64 per 100,000, a rate which is 18 more than that of the previous year, and 1 more than the mean of the corresponding rates of the preceding five years. This rate in the Principal Town Districts was 69, in the Large Town Districts 71, in the Small Town Districts 76, in the Mainland-Rural Districts 41, and in the Insular-Rural Districts 18. In the principal towns this rate varied from 146 in Hamilton, 111 in Dundee, 109 in Motherwell, and 91 in Kilmarnock, to 33 in Edinburgh, 40 in Paisley and in Perth, and 49 in Aberdeen. Of those dying from these diseases, 83·9 per cent. were less than five years old, and 9·1 per cent. more than sixty years old. (*Tables 30-36.*)

Deaths registered during the year as due to cerebro-spinal meningitis or to cerebro-spinal fever numbered 445; in 1907 they numbered 1732, in 1906 they numbered 301, and in 1905 they numbered 2. These figures show that the epidemic of this disease which started in 1906, and greatly increased in 1907, was on the wane in 1908. The death-rate from this disease during the year was 9 per 100,000; in the previous year it was 37. This death-rate varied from 16 in the Large Town Districts, to 0 in the Insular-Rural Districts. In the Principal Town Districts it was 12, in the Small Town Districts 6, and in the Mainland-Rural Districts 4. In the

principal towns this death-rate ranged from 30 in Hamilton, and 19 in Glasgow and Motherwell, to 0 in Perth, 2 in Aberdeen, and 3 in Partick. Of the deaths from this disease, 62·5 per cent. were of males and 37·5 per cent. of females; in the previous year 52·5 per cent. were of males and 47·5 of females. During the year under review deaths from cerebro-spinal meningitis were most numerous in January, February, March, and April; in 1907 they were most numerous in February, March, April, and May. Of those dying from this disease, 52·1 per cent. were of less than five years old, 20·0 per cent. were between five and ten years old, 8·3 per cent. between ten and fifteen years old, and 19·6 per cent. were over fifteen; in the previous year 50·0 per cent. were under five, 19·7 per cent. between five and ten, 9·4 per cent. between ten and fifteen, and 20·9 per cent. over fifteen. (*Tables 30–36 and 37a.*)

Influenza was certified as the primary cause of death in 419 cases, and as a contributory cause in 815 cases, the total being 1234. The total is 51 more than in the previous year. These deaths were most frequent in February, March, and April, when they numbered 347, 293, and 163 respectively, and least numerous in October (19), in August (23), in July (25), and in September (26). Compared with the returns of the previous year, deaths of which influenza was certified as the primary cause are 6 fewer. (*Table 37.*)

Deaths from diseases and accidents of pregnancy and childbirth, including those certified as due to puerperal septic conditions, numbered 676. These deaths include 241 from puerperal septic conditions, 81 from placenta prævia and flooding, 81 from puerperal convulsions, and 273 from other accidents and diseases of pregnancy and childbirth, including abortion and puerperal mania. Births during the year numbered 131,362, and the death-rate from these causes amounted to 5·1 per thousand births, a rate which is 0·2 less than that of the previous year. The death-rate from puerperal septic conditions was 1·8 per thousand births, from placenta prævia and flooding 0·6, and from puerperal convulsions 0·6. The death-rate of the year from these causes combined varied from 8·7 in the Insular-Rural Districts, to 4·5 in the Small Town Districts. In the Large Town Districts it was 5·7, in the Principal Town Districts 5·3, and in the Mainland-Rural Districts 4·6. In the principal towns this death-rate ranged from 8·3 in Kilmarnock, 7·6 in Kirkcaldy, 7·2 in Motherwell, and 6·4 in Perth, to 2·5 in Coatbridge, 2·9 in Partick, and 3·2 in Dundee. In Edinburgh this rate was 6·0, in Paisley 5·9, in Glasgow 5·7, in Aberdeen 5·6, in Hamilton 5·4, in Greenock 5·1, in Govan 4·4, and in Leith 3·8. (*Tables 31-34.*)

Deaths ascribed to tuberculous disease numbered 9462; they are 608 fewer than in the previous year, and 452 less than the average number of such deaths during the preceding five years. Of these 9462 deaths, 6079 were ascribed to phthisis, 1405 to tuberculous meningitis, 996 to tuberculous peritonitis and tabes, and 982 to other forms of tuberculous disease. Compared with the returns of the previous year, deaths from phthisis are 336 fewer, from tuberculous meningitis 238 fewer, from tuberculous peritonitis and tabes 13 more, and from other tuberculous disease 47 fewer. The death-rate of the year from all tuberculous disease is 197 per 100,000, a rate which is 15 less than that of the previous year, 16 less than the

mean of the corresponding rates of the five preceding years, and is the lowest Scottish death-rate from tuberculosis yet recorded in these reports. From 1855 to 1882 the Scottish death-rate from tuberculous disease ranged between 306 and 404, in 1883 it was for the first time below 300, in 1888 for the first time below 250, and this year for the first time below 200. The previous lowest was that of 1905, which was 207. The death-rate from tubercle ranged from 218 per 100,000 in the Large Town Districts, to 176 in the Insular-Rural Districts. In the Principal Town Districts it was 207, in the Small Town Districts 184, and in the Mainland-Rural Districts 177. This death-rate in the principal towns ranged from 257 in Coatbridge, 250 in Dundee, and 248 in Perth, to 149 in Aberdeen, 153 in Partick, and 163 in Kirkcaldy. In Greenock it was 235, in Glasgow 223, in Paisley 209, in Leith 203, in Kilmarnock 198, in Edinburgh 193, in Govan 176, in Hamilton 169, and in Motherwell 169. Of those dying from tuberculous disease during the year, 2180, or 23·04 per cent., were less than five years old; 592, or 6·26 per cent., were between five and ten years old; 480, or 5·07 per cent., were between ten and fifteen years old; 5808, or 61·38 per cent., were between fifteen and sixty years old; and 402, or 4·25 per cent., were over sixty years old. The male death-rate from tuberculous disease was 209 per 100,000, and the female death-rate 186; in the previous year the male rate was 220, and the female 205. Deaths ascribed to tubercle constituted 12·24 per cent. of the total deaths of the year, 12·66 per cent. of the male deaths, and 11·81 per cent. of the female deaths; in the previous year they constituted 13·12 per cent. of the total, 13·40 per cent. of the male deaths, and 12·84 per cent. of the female. (*Tables 30–36.*)

The death-rate from phthisis was 127 per 100,000, which is 8 less than in the previous year, 14 less than the mean of the corresponding rates of the five preceding years, and is the lowest national phthisis death-rate yet recorded. The death-rate from phthisis from 1855 to 1886 ranged between 207 and 283, in 1887 it for the first time was less than 200, in 1902 for the first time below 150, and this year for the first time below 130. The previous lowest on record was that of 1907, which was 135. The death-rate from phthisis varied from 141 in the Insular-Rural Districts, to 118 in the Small Town Districts. In the Mainland-Rural Districts it was 133, in the Large Town Districts 132, and in the Principal Town Districts 126. In the principal towns this death-rate ranged between 177 in Perth, 168 in Dundee, and 136 in Glasgow, to 79 in Partick, 85 in Govan, and 91 in Hamilton. In Coatbridge it was 130, in Leith 128, in Paisley 127, in Edinburgh 122, in Greenock 122, in Kilmarnock 120, in Kirkcaldy 100, in Aberdeen 96, and in Motherwell 93. Of those dying from phthisis during the year, 252, or 4·15 per cent., were less than five years old; 160, or 2·63 per cent., were between five and ten years old; 250, or 4·11 per cent., were between ten and fifteen years old; 5101, or 83·91 per cent., were between fifteen and sixty; and 316, or 5·20 per cent., were over sixty. The male death-rate from phthisis was 130 per 100,000, and the female death-rate 123; the former in the previous year was 138, and the latter 133. (*Tables 30–36.*)

Deaths ascribed to malignant disease numbered 4611; they

are 60 more than in the previous year, and 429 more than the average number of such deaths during the preceding five years. The death-rate from these causes was 96 per 100,000, a rate which is the same as that of the previous year, but 6 more than the mean of the corresponding rates of the preceding five years. Of the deaths from malignant disease, 2409 were ascribed to carcinoma, 251 to sarcoma, and 1951 to other or unspecified forms of cancer. Male deaths from malignant disease numbered 1816, and female deaths 2795; the male death-rate was 78 per 100,000, and the female death-rate 114. The most frequent situations of malignant disease causing male deaths during the year were the stomach, 489 deaths; the liver, 211 deaths; the intestine, 178 deaths; the rectum, 126 deaths; and the tongue, 107 deaths. The most frequent situations of malignant disease causing female deaths during the year were the stomach, 534 deaths; the uterus, 485 deaths; the breast, 357 deaths; the intestine, 319 deaths; the liver, 300 deaths; and the rectum, 108 deaths. Of the males whose deaths from malignant disease were registered during the year, 4·4 per cent. were less than thirty-five years old, 25·5 per cent. were between thirty-five and fifty-five years old, 58·5 per cent. were between fifty-five and seventy-five years old, and 11·6 per cent. were more than seventy-five years old. Of the women whose deaths from malignant disease were registered during the year, 3·5 per cent. were less than thirty-five years old, 29·4 per cent. were between thirty-five and fifty-five years old, 53·0 per cent. were between fifty-five and seventy-five years old, and 14·1 per cent. were more than seventy-five years old. (*Tables 31–36 and 38.*)

Deaths from pneumonia numbered 6928; they are 6 less than those registered in the previous year, but 237 more than the number registered annually during the preceding five years. Of these deaths 1057 were ascribed to lobar pneumonia, 2781 to broncho-pneumonia, 21 to epidemic pneumonia, and 3069 to other or unspecified form of pneumonia. The death-rate from pneumonia was 144 per 100,000, a rate which is 2 less than that of the previous year, but is the same as the mean of the corresponding death-rates of the five preceding years. This death-rate in the Principal Town Districts was 165, in the Large Town Districts 147, in the Small Town Districts 141, in the Mainland-Rural Districts 105, and in the Insular-Rural Districts 71. In the principal towns this death-rate varied from 245 in Coatbridge, and 217 in Hamilton, the two towns in which deaths from measles were relatively most numerous during the year, to 108 in Kirkcaldy and Perth, and 110 in Kilmarnock. Of those whose deaths were ascribed to pneumonia during the year, 3485, or 50·30 per cent., were less than five years old; 179, or 2·59 per cent., were between five and fifteen; 1892, or 27·31 per cent., were between fifty and sixty; and 1372, or 19·80 per cent., were over sixty. Of those dying from lobar pneumonia, 18·35 per cent. were less than five years old, 56·95 per cent. were between fifteen and sixty years old, and 22·52 per cent. were over sixty years old. Of those dying from broncho-pneumonia, 81·84 per cent. were less than five years old, 6·83 per cent. were between fifteen and sixty years old, and 9·31 per cent. were more than sixty years old. (*Tables 30–36.*)

Deaths ascribed to bronchitis numbered 5177; they are 10 more than those registered during the previous year, and 10 more than the

average number of such deaths registered during the preceding five years. The death-rate from bronchitis was 108 per 100,000, a rate which is 1 less than that of the previous year, and 3 less than the mean of the corresponding rates of the five preceding years. It ranged from 119 in the Principal Town Districts, to 86 in the Insular-Rural Districts. In the Large Town Districts it was 111, in the Small Town Districts 97, and in the Mainland-Rural Districts 93. In the principal towns this rate varied from 146 in Coatbridge, 144 in Greenock, 143 in Paisley, and 142 in Dundee, to 74 in Partick, 85 in Edinburgh, and 93 in Leith. Of those dying from bronchitis, 31·33 per cent. were less than five years old, 18·56 per cent. between five and sixty years old, and 50·11 per cent. more than sixty years old. (*Tables 30-36.*)

Deaths ascribed to pneumonia and bronchitis combined numbered 12,105; they are 4 more than in the previous year, and equal to a death-rate of 252 per 100,000, a rate which is 3 less than that of the previous year, and the same amount less than the mean of the corresponding rates of the preceding five years. (*Tables 35 and 36.*)

Deaths from nephritis and Bright's disease numbered 2255, and are 28 fewer than in the previous year; from diabetes 404, which is 4 more than in the previous year; from anæmia 439, which is 5 more than in the previous year; from syphilis 230, which is 4 more than in the previous year; from rheumatism and gout 545, which is 24 fewer than in the previous year, 94 of them being ascribed to rheumatic fever, 210 to rheumatism of the heart, 237 to chronic rheumatism or rheumatic arthritis, and 4 to gout. (*Pp. 168–179.*)

Premature birth debility was the ascribed cause of death in 2350 cases, and congenital defects in 709; the former are 118 more than in the previous year, and the latter 8 more. Children dying from these causes during the year amounted to 1 in 43 of the number of births registered during the year; in the previous year they amounted to 1 in 44. (*Pp. 172–173.*)

Deaths ascribed to violent causes numbered 3067, 2183 being of males, and 884 of females. The annual death-rate from these causes was 64 per 100,000, that of males being 93, and of females 36. These deaths are 56 fewer than in the previous year, but 28 more than the average number of the preceding five years. The death-rate is 2 less than that of the previous year, and 1 less than the mean of the corresponding death-rates of the preceding five years. This death-rate varied from 78 in the Insular-Rural Districts, to 58 in the Large and Small Town Districts. In the Mainland-Rural Districts it was 71, and in the Principal Town Districts 65. In the principal towns this death-rate varied from 78 in Glasgow, and 76 in Kilmarnock, to 18 in Partick, and 23 in Motherwell. Of the 3067 deaths from violent causes, 19 were ascribed to homicide, 248 to suicide, 2798 to accident, and 2 were by execution. (*Tables 31–36.*)

Among the deaths from accidents, 565 were ascribed to drowning, which is 26 more than in the previous year; 380 to burns and scalds, or 3 fewer than in the previous year; 328 to accidents connected with horses and vehicles, or 27 fewer than in the previous year; 168 to falls, or 23 fewer than in the previous year; 209 to accidents in mines and quarries, or 6 more than in the previous

year; 123 to overlaying, or 12 fewer than in the previous year; 149 to other forms of suffocation, or 14 fewer than in the previous year; 83 to poisoning, or 3 fewer than in the previous year; 67 to weather agencies, or 19 fewer than in the previous year; 38 to accidents with machinery, or 11 fewer than in the previous year; 43 to accidents on ships, on boats, or in docks, drowning accidents excepted, or 4 more than in the previous year; 16 to accidents with weapons and implements, or 5 more than in the previous year; and 629 to other or unspecified cause, these last being 33 more than in the previous year. (*Pp. 180–183.*)

Of the accidental deaths connected with horses and vehicles, 171 were connected with railway vehicles, 148 with other vehicles, and 9 were due to accidents with horses. (*Pp. 180–183.*)

Of the accidental deaths in mines and quarries, 186 were in coal mines, 16 in other mines, and 7 in quarries. (*Pp. 180–183.*)

A list of poisons which caused accidental death during the year is given in Table 39A. It may there be seen that the poisons responsible for most deaths during the year were opium and its preparations, 27; chloral hydrate and other narcotics, 9; coal gas, 10; carbolic acid and its preparations, 9; carbon monoxide and other fumes from stoves, 5; and chloroform, 3. (*Table 39a.*)

In addition to the 83 deaths from poisons mentioned above, there were 36 deaths in which anæsthetics were a secondary or contributing cause of death, having been administered for surgical purposes. In 22 of these cases chloroform was the anæsthetic used, in 1 it was ether, in 1 it was stovaine, and in 1 chloroform and ether; in 11 the nature of the anæsthetic was not specified. (*Table 39a.*)

Male deaths attributed to suicide numbered 176, and female 72; the former are 27 fewer than in the previous year, the latter are 1 more. Of the male deaths from suicide, 67 were caused by hanging, 39 by cutting or stabbing, 20 by drowning, 16 by poisons, 15 by gunshot, 9 on railways, 6 by precipitation, and 4 by other or unstated means. Of the female deaths from suicide, 22 were caused by hanging, 18 by drowning, 14 by cutting or stabbing, 10 by poisons, and 4 each by gunshot and precipitation. (*Table 39.*)

Among the suicidal deaths of the year by poisoning there were 4 by opium and its preparations, 5 by carbolic acid, 3 by coal gas, 2 each by ammonia and oxalic acid, and 1 each by chloroform, cyanide of potassium, strychnine, hydrochloric acid, and nitric acid, and 5 by other or unspecified poison. (*Table 39a.*)

The comparative prevalence of some of the more frequent causes of death during the year expressed as per 10,000 specified causes of death was as follows:—Tubercle, 1224; heart disease, deaths from syncope and heart failure included, 1117; pneumonia, 896; bronchitis, 669; apoplexy, 601; malignant disease, 596; diarrhœal diseases, 398; violence, 397; measles, 324; hooping-cough, 277; Bright's disease, 193; meningitis, excluding tuberculous meningitis and cerebro-spinal fever, 144; diphtheria, 90; rheumatic diseases, 70; influenza, 54; scarlet fever, 49; and enteric fever, 36.

METEOROLOGICAL NOTES.

The following remarks on the weather of the year are the Notes made by Mr. A. Watt, M.A., F.R.S.E., under the direction of the Council of the Scottish Meteorological Society, which appear in the Registrar-General's Quarterly Reports:—

The month of *January* was characterised by a high mean pressure; a mean temperature fractionally above the average, with a slightly high mean daily range; a mean rainfall just about the average; and an excess of winds from south-west and west.

The mean pressure was 29·972 inches, or 0·169 inch above the normal. On 6th a deep depression passed eastwards across the extreme north of Scotland, but generally low pressure areas that influenced our weather lay far to the north of our Islands. At Leith the barometer remained above 30 inches from 1st to 5th, from 10th to 14th, and from 18th to 25th, the extremes there being 30·542 inches on 2nd and 29·167 inches on 28th.

The mean temperature was 37°·6, or 0°·3 above the normal, the days being 0°·7 above and the nights 0°·1 below their respective averages. The opening days were very cold, the actually lowest temperatures for the month in practically all mainland districts occurring between 2nd and 5th. The lowest shade temperatures recorded were 9° at Drumlanrig on 5th, and 10° at West Linton on 4th and at Balmoral on 5th, whilst on the latter day the exposed thermometer at Balmoral fell to within 1° of zero. On 6th—the warmest day of the month in one or two districts—an abrupt rise of temperature took place

TABLE X.—Monthly Mortality, Mean Temperature, and Mean Rainfall in Scotland during 1908, compared with the Mean of the Ten Years 1891-1900.

	Year 1908.				1891–1900.		
Months.	Mean Temperature.	Mean Rainfall.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.	Mean Rainfall.

Note.—The total number of Deaths given in this Table is compiled from the Registrar-General's Quarterly Reports, which are based on Returns furnished by the Registrars, and does not exactly correspond with that given in other parts of this Report.

under the influence of strong south-westerly winds, the morning readings on that day being higher than those of the 5th by 20° at many places, by 25° at Crathes and by as much as 30° at Balmoral. Colder weather followed some days later with a recurrence of south-westerly winds and high temperatures around 17th, which was in general the warmest day of the month. Thereafter fluctuations were less important, rather mild conditions prevailing until about the close of the month. The highest shade readings were 59° at Gordon Castle on 17th, and 55° at Nairn on that day, and at Duns and Marchmont on 6th.

The mean rainfall was 3·92 inches, or 2 per cent. above the normal. Along a fairly wide belt between the Firths of Forth and Clyde there was a moderate excess, amounting to 28 per cent. at Paisley, and towards north-west a slight excess, whilst eastern districts generally experienced a shortage, Aberdeen having only about half its normal amount. On 5th, heavy falls occurred in western and central districts (2·65 inches at Lochbuie, and 2·17 inches at Greenock), and on 7th large amounts were general in the east, the Lothians and Border Counties having more than 1 inch. After several fine days, heavy rains again occurred towards west and north-west from 13th to 17th, Fort-William having 1½ inch on 14th, and an aggregate of more than 5 inches for these five days. The last week of the month was wet, except in some eastern districts, with some heavy falls on 25th and 26th. The totals for the month ranged from 11·02 inches at Fort-William to just over 1 inch at Aberdeen. At Baltasound rain fell on 29 days.

Gales, occasionally very severe, and usually from south-west, were more or less general on 6th and 7th, from 15th to 17th, and during the last week of the month. Sleet and snow were common around the 6th, but to no great depth, whilst very heavy falls were experienced in the north from 27th onwards. Thunderstorms in Orkney and Shetland on 26th; at Fort-William and Glencarron on 27th; and at Glencarron on 31st. Lightning rather widely noted on these dates. Sunshine amounts differed little from the normal, though slightly in excess in the east. Fog in the Firth of Forth from 2nd to 5th, and on some later days; but little reported elsewhere. Auroras noted at Baltasound on 5th, and at Deerness on 8th.

The month of *February* was characterised by a slightly high mean pressure; a very high mean temperature, with an average mean daily range; an average mean rainfall; and a large excess of winds from west and north-west.

The mean pressure was 29·880 inches, or 0·034 inch above the normal. During the first half of the month barometric fluctuations were unimportant, but thereafter conditions were very unsettled, especially on 17th, from 21st to 23rd, and from 26th to 29th. On 22nd and 28th the barometer fell below 29 inches, falling to 28·17 inches at Sumburgh Head on the evening of the 22nd. At Leith the extremes were 30·659 inches on 6th, and 28·866 inches on 28th.

The mean temperature was 40°·4, or 2°·2 above the normal, the days being 2°·2 and the nights 2°·1 above their respective averages. The excess was nearly everywhere well marked, but Shetland had hardly its average temperature. Variations were unusually moderate

for a winter month. The opening days were somewhat cold, but for about three weeks decidedly mild conditions prevailed with but trifling interruptions, whilst during the cold weather of the last few days when north-westerly winds prevailed, only Bowhill, in Ayrshire, which stands at a considerable elevation, reported as much as 10° of frost in shade. The actual shade extremes were 56° at Loanhead (Logie Coldstone) and Crathes on 7th, and 22° at Bowhill on 28th and 29th.

The mean rainfall was 3·05 inches, or 1 per cent. below the normal. Areas of excess and defect were well marked. Thus to the east of lines running from Peterhead to Greenock, and thence to about Kirkcudbright, rainfall was in general deficient, whilst elsewhere it was above the average. In the wet regions the excess was most pronounced towards the north (84 per cent. at Dunrobin, and 73 per cent. at Nairn), whilst at some north-western stations rain fell on every day of the month. The largest total was 10·44 inches at Glencarron. In eastern districts some coast stations had less than 1 inch of rain (Arbroath 0·55 inch and Dundee 0·66 inch), whilst the absence of heavy falls was remarkable, several places not having as much as a quarter of an inch on any one day. Outside the North-West Highlands but little rain fell during the first half of the month, whilst the heaviest general falls occurred on 21st and 22nd, Fort-William having amounts of more than 1 inch on each of these days. Except in some eastern districts, rain, sleet, or snow fell daily from 21st onwards, Dunrobin registering 1·32 inch on 29th.

A severe gale from the west occurred on 22nd, with rain, hail, and sleet. Snow at the beginning of the month was restricted chiefly to the north, but during the last two or three days a severe snowstorm was general, and by the afternoon of the 29th the West Highland Railway was completely blocked on the Moor of Rannoch. Thunderstorms in south-east, south, and in some western districts, accompanied the gale of 22nd, and, here and there, the snowstorm at the close of the month. Sunshine was above the average, except in north and north-west. Amounts of more than 100 hours at Aberdeen, Crathes, and Balruddery were in excess of those in the south of England (*e.g.*, Balruddery 112 hours, Brighton 92, Bournemouth 73, Jersey 68). But little coast fog was reported. Auroras noted at Baltasound on 8 days.

The month of *March* was characterised by a rather low mean pressure; a low mean temperature, with a low mean daily range; a very high mean rainfall; and a considerable excess of winds from S.E. and S.

The mean pressure was 29·750 inches, or 0·059 inch below the normal. The barometric fluctuations were at times very considerable, the deepest depressions that influenced our area occurring on 5th to 6th, 8th to 9th, 22nd, 27th, and 30th. At Leith pressure was above 30 inches only from 12th to 15th, on 18th and 19th, and from 24th to 26th, the extremes there being 30·227 inches on 14th and 28·676 inches on 9th.

The mean temperature was 38°·3, or 1°·3 below the normal, the days being 1°·8 and the nights 0°·7 below their respective averages. The general mean for the month was 2°·1 below that for February,

though in the northern islands, where there was slight temperature excess, the month was warmer than its predecessor. Generally speaking, much cold weather was experienced, the first and third weeks being especially cold, with very low day temperatures at times. During the first three weeks the sheltered thermometer at Balmoral reached 40° on only five days, and even at Leith it remained below that level from 3rd to 6th and on 18th and 19th. Lowest temperatures occurred, as a rule, on 5th, but in some districts on 13th or about 20th, the lowest shade reading being 10° at Balmoral on 5th, when an exposed thermometer at that place fell to 4°. Highest readings occurred, as a rule, on 23rd, when Nairn, Glasgow, Leith, and Dumfries reached 56°, and from that date onwards rather milder conditions prevailed.

The mean rainfall was 4·55 inches, or 57 per cent. above the normal. This general rainfall has been exceeded in March during the last thirty years only in 1897 and 1903. Glencarron had a moderate shortage, but most stations had rainfalls above the normal by at least 50 per cent., whilst several, such as Dundee, Marchmont, and Drumlanrig, had more than twice the average. At Dundee the month was the wettest March for at least forty years. From 11th to 21st there were many fine days, some districts being practically rainless during that period, but outside these dates conditions were more or less unsettled. Some heavy falls occurred between 6th and 9th (1·46 inch at Greenock on 8th, and 1·80 inch at Lochbuie on 9th). On 24th many widely scattered places, such as Dunrobin, Dundee, Edinburgh, Fort-William, Colmonell, and Dumfries, had more than 1 inch, whilst on each of the three days, 28th, 29th, and 30th, Fort-William had falls exceeding 1 inch, Bendamph (Loch Torridon) had 1·85 inch on 28th, and Stronvar 1½ inch on 28th and also on 30th.

Winds of gale force, and as a rule from between S.E. and S.W., prevailed more or less generally on 8th and 9th, on 22nd and 23rd, and from 28th to 31st. Early in the month sleet and hail were frequent, with a continuance in northern districts, on the first day or two, of the snowstorm with which February closed. Again, towards the end of the month, snow and hail occurred in many districts. Thunder at Gordon Castle on 1st and 31st, and at Colmonell on 30th. On 18th Edinburgh experienced a thick yellow fog, whilst hardly any coast fog occurred except about the middle of the month in the Firth of Forth. Sunshine was somewhat above the average in the north, but in most districts deficient. Auroras more or less widely observed on 1st, 2nd, 26th, 27th, 28th, and 29th.

The month of *April* was characterised by a high mean pressure; an extremely low mean temperature, with a low mean daily range; a low mean rainfall; a large excess of winds from between north-west and north-east.

The mean pressure was 29·986 inches, or 0·103 inch above the normal. No very deep depression occurred, and conditions were almost continuously influenced by high pressure areas, lying, at first, over Western Europe, and, later, over the Iceland area. At Leith pressure was above 30 inches from 5th to 9th, from 12th to 18th, and on 29th and 30th, the extremes there being 30·609 inches on 16th and 29·417 inches on 25th.

The mean temperature was 41°·2, or 2°·9 below the normal, the days being 3°·4 and the nights 2°·3 below their respective averages. The month was remarkable for abnormally cold weather experienced during the fourth week, and especially between 23rd and 25th. The mean temperature of the week ending on 25th was from 8° to 10° below the normal, and shade minima of 9° at Perth on 24th and at Corstorphine on 25th are the absolutely lowest readings recorded in Scotland in any April for at least 50 years. Very low day temperatures occurred about this time, and frequently throughout the month, the maximum at Edinburgh (Blackford Hill) on 24th being as low as 32°·3. The actual highest readings noted were 68° at Balruddery, Crieff, and Buchlyvie on 17th, that being almost the only moderately warm day of the month.

The mean rainfall was 1·79 inch, or 21 per cent. below the normal. There was a slight excess in the extreme north, in parts of Banffshire and Aberdeenshire, and near Edinburgh, but over the country generally there was a deficiency, amounting in Perthshire to about 50 per cent. Strathpeffer, Inverness, Dundee, and Crieff had aggregates of less than 1 inch. The heaviest general falls occurred early in the month; on 8th; in the Edinburgh area on 23rd or 24th, when the precipitation consisted largely of snow; or on 30th. The largest daily falls reported were 1·06 inch at Fort-William on 2nd and 1·87 inch at Glencarron on 3rd. From 11th to 23rd practically no precipitation occurred in some inland and western districts.

On the evening of 23rd a snowstorm of extraordinary severity for the advanced time of year set in over a great part of the country. Whilst some central and western districts reported no snow, or merely frequent showers, there was around Edinburgh a fall of several inches. In the South of England the storm was much more severe, and over our Islands generally for some days, with winds from the north, conditions were of a very wintry character, for which there seems no parallel in official weather records for the month of April. Thunder at Baltasound on 3rd, and at Duns on 4th. Sunshine variable in amount, but deficient towards the south-east, normal at Aberdeen and Stornoway, and in excess at Deerness. Coast fog in the east on 8th, 9th, and 30th; in the west on 8th. Auroras observed at Baltasound on 3rd, 4th, 8th, 25th, and 29th.

The month of *May* was characterised by a slightly low mean pressure; a high mean temperature, with a somewhat low mean daily range; a mean rainfall practically equal to the average; an excess of winds from a south-westerly quarter.

The mean pressure was 29·899 inches, or 0·045 inch below the normal. Pressure was high for the first two or three days, then low until 15th, and thereafter almost continuously high. At Leith the sea-level extremes were 30·539 inches on 28th, and 29·217 inches on 5th, the barometer there being above 30 inches from 1st to 3rd, 16th to 20th, and 26th to 30th.

The mean temperature was 50°·7, or 1°·7 above the normal, the days being 1°·3 and the nights 2°·2 above their respective averages. The month was on the whole the mildest May since 1901, and in great contrast to the Mays of 1906 and 1907, low night-readings being very infrequent. There were some considerable variations of

temperature, but a well-marked temperature excess prevailed towards the end of the month, all stations recording their maxima between 27th and 31st, the majority on 28th, when Kingussie, Perth, Buchlyvie, and Paisley reached 81°. The coldest nights were, as a rule, those of 21st and 22nd, Balmoral and Kingussie reporting 30° in shade on night of 21st. It may be noted that on the East Coast the maxima on 29th were much lower than those of the preceding day. Thus at Leith the shade thermometer reached 76° on 28th, but only 56° on 29th.

The mean rainfall was 2·39 inches, or 4 per cent. above the normal. In southern districts and in the extreme north there was an excess, amounting at Dumfries, Wick, and Deerness to about 50 per cent., whilst towards the north-east a moderate deficiency prevailed, amounting at Inverness to 47 per cent. Rain fell on 24 days at Glencarron and Poltalloch, and in some districts was rather frequent, considering the comparatively small aggregates. Lochbuie reported more than 1 inch on 16th, but large daily amounts were rare. The heaviest general fall occurred on 8th (0·97 inch at Fort-William); but in the Lothians on 30th. Generally speaking, rain fell almost daily from 1st to 12th, and frequently from 16th to 25th, whilst the last six days were rainless, or all but so, except in east and south, where considerable falls took place on 30th.

Gales did not occur. On the night of 30th a rather severe thunderstorm occurred in east, south, and some western districts, whilst earlier in the month thunder was noted on varying dates, *e.g.*, at Buchlyvie on 6th, 13th, 21st, and 24th, and at Wolfelee on 13th, 15th, and 22nd. Hail occurred at Baltasound on 1st, and at various places between 21st and 24th. Sunshine was deficient at Deerness, but in general rather above the normal. Coast fog was rather frequent early in the month, and in east and north during the closing days.

The month of *June* was characterised by a high mean pressure; an average mean temperature, with an average mean daily range; a slightly low mean rainfall; a slight excess of winds from between N.E. and N.W.

The mean pressure was 30·033 inches, or 0·087 inch above the normal. The barometer was rather high early in the month, and continuously high during the last ten days, whilst for several days around the middle of the month pressure was low and irregular. On 13th a rather deep depression spread in from the Atlantic, with heavy rains from S.W. and S. At Leith the sea-level extremes were 30·445 inches on 27th and 29·328 inches on 13th.

The mean temperature was 54°·9, being the normal. The differences for the individual stations ranged from an excess of 1°·9 at Perth to a defect of 1°·4 at Fort-Augustus, but many stations practically agreed with their normals. Early in the month temperature was, on the whole, above the average; whilst the second week was cold, and the third decidedly cold for the time of year, some very low day readings occurring. The last few days were marked by bright warm weather. The warmest days were, as a rule, from 25th to 28th, Poltalloch reaching 87° in shade on 28th; Perth and Buchlyvie 85° on 27th; and a good many stations 80° or over on some one day. Lowest temperatures occurred on varying dates between 5th and 21st, Kingussie

reporting 33° in shade on 5th, and Balmoral a similar reading on 12th and 15th.

The mean rainfall was 2·21 inches, or 12 per cent. below the normal. There was a decided shortage over the eastern half of the country, Edinburgh having only half its normal amount; whilst towards west and south there was in general an excess. Falls of 1 inch or over occurred at Glencarron and Lochbuie on 10th; and at Marchmont, Leadhills, Drumlanrig, and Cargen on 13th, a fall of 1·05 inch at Marchmont on the latter date being more than half the aggregate for the month. It is noteworthy that some eastern stations entirely escaped heavy falls, Dundee, Arbroath, and Gordon Castle not registering as much as a quarter of an inch on any one day. The last 8 days of the month were rainless, or practically so, in nearly all districts, whilst the wettest period was from 10th to 15th.

Thunderstorms occurred at Kelso on 1st, and in south and west on 2nd, whilst thunder was heard here and there later in the month. Hail at Logie Coldstone on 12th and 14th, and at West Linton on 19th. Coast fog in east and north from 1st to 3rd, and from 25th to 29th; less generally in west and south. The distribution of sunshine varied, Stornoway having a decided deficiency and Edinburgh as decided an excess. The closing days of the month were extremely sunny.

The month of *July* was characterised by a rather high mean pressure; a fractionally low mean temperature, with a slightly low mean daily range; a slightly low mean rainfall; an excess of winds from an easterly quarter.

The mean pressure was 29·945 inches, or 0·053 inch above the normal. Pressure was high and steady during the first week and during the last twelve days, but irregular from about 9th to 18th, the deepest depression occurring on the night of 16th to 17th. At Leith the sea-level extremes were 30·428 inches on 29th, and 29·200 inches on 17th.

The mean temperature was 57°·0, or 0°·3 below the normal, the nights being of average temperature and the days 0°·6 below. The bright warm weather which marked the last few days of June continued throughout the early days of July, high temperatures prevailing on 1st, 2nd, and 3rd. On each of these days the shade thermometer at Crieff and Cargen rose to 80° or above, whilst on 2nd, which was generally the warmest day of the month, we note readings of 88° at Perth, Buchlyvie, and Paisley, and of 91° at Dumfries, this last being apparently the highest temperature recorded during the month anywhere in the British Isles. On the night of 5th to 6th some low readings for midsummer were recorded, Balmoral falling to 32° in the screen, and Crathes to 25° in the open. The second and third weeks were rather colder than the average, whilst towards the close of the month, with steadier pressure conditions, warmer weather again prevailed.

The mean rainfall was 2·87 inches, or 8 per cent. below the normal. Distribution was rather irregular. Except for a considerable local excess between the Dee and the Don, northern districts had a rainfall decidedly below the average. Thus Glencarron and Nairn had only two-fifths of their normal amounts, and Strathpeffer, where the

month's total was as small as 0·81 inch, only one-fourth. Elsewhere we note an excess of as much as 30 per cent. at Poltalloch, Leith, Duns, Cargen, and Cally. The first week of the month was rainless in many districts, whilst from 8th to 17th conditions were very unsettled with some heavy daily falls. Tillypronie reported 1·48 inch on 11th; Duns 1·77 inch on 12th; and Leith 1·11 inch on the same day; Gordon Castle 1·22 inch on 17th. From 18th onwards some districts were rainless except for falls on 24th and 25th, whilst in others rain fell rather frequently after 20th.

The high temperatures of 2nd and 3rd were associated with thunderstorms in many districts, and a heavy fall of hail in Perthshire. Thunder also occurred on various later dates, *e.g.*, on 12th at Leith, on 16th at Glasgow, on 21st at Tillypronie. Coast fog was reported somewhat frequently. On the nights of June 30th and July 1st, and more moderately on July 2nd, a remarkable sunset glow prevailed at midnight. Very sunny days early in the month were succeeded by cloudy skies, and the aggregates of bright sunshine were deficient in all districts.

The month of *August* was characterised by a slightly high mean pressure; a somewhat low mean temperature, with a slightly high mean daily range; a rather low mean rainfall; a slight excess of winds from W. and N.W.

The mean pressure was 29·900 inches, or 0·044 inch above the normal. The high pressure system which dominated our weather during the latter part of July was maintained almost continuously until August 20th. Thereafter disturbed conditions set in with readings below 29·5 inches, very generally from 25th to 29th, and below 29 inches in Shetland on 27th. At Leith the sea-level extremes were 30·374 inches on 2nd and 29·140 inches on 28th.

The mean temperature was 55°·7, or 0°·9 below the normal, the days being 0°·6 and the nights 1°·2 below their respective averages. Some stations agreed closely with their normals, and a few had a slight temperature excess; but in general the deficiency was well-marked. During the first week or so temperature was above the normal, with maxima for the month very generally on 2nd, but here and there on 6th, Buchlyvie reporting 82° in the shade (on the former day) and Paisley and Dumfries 80°. The coldest nights occurred from 11th to 13th, the sheltered thermometer falling to 30° at Balmoral on 12th and 13th, and to 31° at Wick and Gordon Castle on the latter day. At Balmoral the exposed thermometer fell to 24° on 12th and to the same figure at Crathes on the following day. After the middle of the month the nights were fairly mild, but the days were distinctly cold for the time of year, and afternoon temperatures below 60° were somewhat common.

The mean rainfall was 3·10 inches, or 16 per cent. below the normal. Distribution was rather irregular. Some western and southern districts had an excess, but nearly all eastern and northern areas a deficiency, which was most marked towards the south-east. Thus a total of 6·45 inches at Poltalloch represented an excess of 36 per cent., and of 1·42 inch at Leith a deficiency of 53 per cent. In some districts the first three weeks were almost continuously fine, and in most the only important interruption occurred between 8th

and 10th. On 9th heavy falls were registered in the north-west, 2½ inches at Glenquoich, and 1½ inch at Glencarron. The last ten days were as a rule wet, and some heavy falls occurred. Thus on 25th Poltalloch had 1¾ inch and Greenock 1½ inch; and Fort-William more than 1 inch on both 26th and 27th. The month closed with a rainstorm which only some northern districts escaped, and on 31st many falls of more than 1 inch were reported, Montrose registering as much as 1·70 inch.

The heavy rains of the closing days of the month were associated with stormy weather, and on the night of 31st a strong gale from the S.W. prevailed. Between 25th and 27th thunderstorms occurred over a wide area, with hail in places. During the first three weeks fog occurred rather frequently in the north. Bright sunshine was above the average over a great part of the country, but slightly deficient at Aberdeen, Stornoway, and Deerness.

The month of *September* was characterised by a slightly low mean pressure; a fractionally high mean temperature, with an extremely low mean daily range; a very high mean rainfall; a defect of westerly winds.

The mean pressure was 29·840 inches, or 0·026 inches below the normal. Deep depressions occurred on 1st and on 8th to 9th, and throughout the month there was no well-marked period of high pressure. The sea-level extremes at Leith were 30·144 inches on 4th and 29·102 inches on 1st.

The mean temperature was 53°·0, or 0°·2 above the normal, the days being 1°·0 below and the nights 1°·4 above their respective averages. As a rule the means for the individual stations agreed closely with the normal. Temperature was considerably below the average during the first fortnight, with lowest readings for the month about 5th or 12th. On 5th Balmoral reported 27° in the shade and 20° in the open; and on 12th Stronvar, Colmonell, and other stations 30° in shade. About 16th to 20th mild conditions prevailed, with a maximum of 74° at Gordon Castle on 17th; and at the very end of the month a spell of remarkably warm weather for the advanced time of year set in. Highest readings for the month occurred in many districts on 30th, and the night of 29th to 30th was the mildest of the year in many districts. At Leith the minimum reading for that night was as high as 63°. This outburst of warm weather was associated with a very humid atmosphere. We may note that on 21st and 22nd the range of temperature was exceedingly small, the thermometer at Leith fluctuating only between 56° and 54°.

The mean rainfall was 4·90 inches, or 39 per cent. above the normal. Over the country generally there was a decided excess, amounting to fully 50 per cent. in many districts, and to about 90 per cent. at Nairn, Dundee, and Rothesay. In the Border Counties, however, the rainfall was a little below the average. Extremely heavy falls occurred between 5th and 8th. Thus on 5th Glenquoich had 2·38 inches and Lochbuie 2·00 inches; on 7th many widely-scattered stations, such as Lairg, Fort-William, Dundee, and Drumlanrig more than 1 inch, Rothesay and Buchlyvie nearly 2 inches, and Greenock 2½ inches; and on 8th Stornoway, Wick, and Glencarron falls of nearly 2 inches, and Inverness 2·30 inches. From 13th to 17th some-

what heavy falls again occurred. Considerable flooding took place in the north early in the month, and everywhere harvesting operations were seriously interfered with by the heavy rainfall. At Dundee the month was the wettest September since 1869, and in all districts the number of days with rain was unusually large, as many as 28 at Stornoway and Arbroath.

Stormy weather prevailed at the beginning of the month, and about the 9th, and in general conditions were very unsettled. Thunder was reported at a number of stations on 10th and again towards the end of the month. Hail occurred at Arbroath and West Linton on 2nd, and at some other places on varying dates. Fog was continuous in the Firth of Forth from 20th to 25th. Bright sunshine was everywhere very deficient. Auroras noted at Baltasound on 4th, 11th, 14th, and 24th. The display of 11th was widely observed, and on 29th and 30th several southern stations again reported the phenomenon.

The month of *October* was characterised by an abnormally high mean pressure; an abnormally high mean temperature, with a slightly low mean daily range; an abnormally low mean rainfall; a large excess of winds from a south-easterly quarter.

The mean pressure of 30·076 inches was as much as 0·262 inch above the normal, and during the last fifty years has been equalled in October only in 1897. The fluctuations of the barometer were unusually slight, and at Leith pressure fell below 30 inches only between 8th and 14th and on 28th and 30th, the sea-level extremes there being 30·555 inches on 22nd and 29·686 inches on 10th.

The mean temperature was 52°·6, or as much as 6°·0 above the normal, the days being 5°·8 and the nights 6°·2 above their respective averages. The temperature excess was strongly marked in all districts, and the month was decidedly the mildest October for at least fifty years. Conditions at the beginning of the month were entirely abnormal. At Edinburgh the 1st was the warmest day of the present year, and on that day Broomlands (Kelso) and Corstorphine reached 79° in the shade, whilst on 3rd Loanhead (Logie Coldstone) and Tillypronie reached 81°. Such high readings in October are unprecedented. Temperature maintained an unusually high level during the greater part of the month, the only cold weather occurring with north-easterly winds during the fourth week. On 25th Balmoral reported 18° in shade, and on 26th Kingussie 19°.

The month was as remarkable for its low rainfall as for its mildness, and appears for the country as a whole to have been the driest October for at least half a century. The mean of all the stations was 1·82 inch, or 55 per cent. below the normal. In parts of Berwickshire and Forfarshire there was a local excess, but considerable areas had only one-quarter or one-fifth of their normal rainfalls, the deficiency being most pronounced in the north-west and north. Many stations had aggregates of less than 1 inch, Inverness and Kingussie only ½ inch, and Nairn only 0·42 inch. In general the number of days with rain was very small, some districts being rainless, or all but so, during the first half of the month, and nearly all quite rainless from 21st to 25th. The only very heavy falls experienced were (1) in the north-west on 10th, when Glencarron had

1·03 inch, or fully half the total for the month; (2) on 18th in some eastern districts, Montrose having 2·18 inches, Duns and Marchmont 1½ inch, and Crieff 1 inch.

Wind force was, as a rule, light, but rather stormy weather prevailed on the north-west coast between 8th and 12th, and in the extreme north from 19th to 22nd. A thunderstorm at Rona on 1st and at Lochindaul on 8th. A good deal of fog occurred at the beginning, middle, and end of the month, the densest visitations being on the south-west coast from 1st to 5th, and in east and north on 16th. Sunshine varied greatly in amount, Nairn, with 125 hours, having three times as much as Castlebay with only forty-one hours. Auroras noted at Baltasound on 25th, 26th, 29th, and 31st, that on 31st being widely observed.

The month of *November* was characterised by a slightly high mean pressure; a high mean temperature, with a fractionally high mean daily range; a somewhat low mean rainfall; a considerable excess of winds from south-west and west.

The mean pressure was 29·879 inches, or 0·043 inch above the normal. Considerable fluctuations occurred from 21st to 24th, with lowest readings for the month on 22nd. On the evening of that day the barometer at Leith fell to 28·882 inches, and on the morning of 23rd it stood almost an inch higher. The maximum at Leith was 30·380 inches on 30th.

The mean temperature was 43°·9, or 3°·0 above the normal, the days being 3°·1 and the nights 2°·9 above their respective averages. The general mildness of the month was well marked in all districts, and interrupted only between 6th and 10th, on 19th and 20th, and at the very close of the month, with shifts of wind from the prevailing southerly direction to east or north. Highest temperatures occurred on 1st, when Gordon Castle reached 60° in shade, about 12th, or on 28th. The generally coldest weather was experienced on 9th and 10th. On 10th the sheltered thermometer at Perth did not rise above the freezing point, and on the preceding night West Linton reported a minimum of 16°, which was decidedly the lowest temperature experienced anywhere during the month.

The mean rainfall was 3·28 inches, or 14 per cent. below the normal. To the north and north-west of the Caledonian Canal there was rather more than the average rainfall, but most other districts had a deficiency, the shortage towards north-east and south-east being extremely well-marked and amounting in Berwickshire to 50 per cent. In the south of Scotland practically no rain fell during the first nine days of the month, and but little elsewhere; but thereafter conditions were generally unsettled till near the end of the month, though towards both north-east and south-east there were many fine days. The wettest weather was during the fourth week, but the general absence of very heavy falls was noteworthy; Lochbuie, however, had 1½ inch on 21st, Dumbarton and Glencarron fully 1 inch on the same day, and Stronvar more than 1 inch on 24th and on 27th.

Stormy weather was experienced in the north on 17th, and for several days from 22nd onwards gales were general. Between 20th and 25th thunderstorms occurred at widely-scattered places on some

day or other—at Fort-William on 22nd, 24th, and 25th. Coast fog occurred from 1st to 3rd, but practically none thereafter. Sunshine differed but little in amount from the normal. Auroras noted at Gordon Castle on 3rd; at various places on 7th, 13th, 14th, or 17th; at West Linton on 23rd; at Baltasound on 16th, 17th, and 28th.

The month of *December* was characterised by a slightly low mean pressure; a somewhat high mean temperature, with a slightly high mean daily range; a somewhat low mean rainfall; a large excess of winds from a southerly quarter.

The mean pressure was 29·742 inches, or 0·038 inch below the normal. The deepest depression of the month occurred on the night of 10th, when the barometer at Leith fell to 28·665 inches, the highest reading there being 30·374 inches on 1st.

The mean temperature was 39°·3, or 1°·2 above the normal, the days being 1°·5 and the nights 1°·0 above their respective averages. The almost continuously mild weather for which the months of October and November were remarkable was prolonged, with but slight interruptions, until about 24th December, and temperature was frequently greatly above the average for the time of year. Highest readings occurred as a rule between 20th and 22nd, but here and there during the first week, the actual highest being 56° at Oban on 21st. On 25th, with a shift of wind to south-east, and later to east, under the influence of a Continental high-pressure system, a short spell of severe cold set in with very low day and night temperatures. The cold was, however, less severe than that experienced in Central England, where shade readings below or but little above zero occurred, whilst the lowest minima reported in Scotland were 10° at Lednathie and 12° at Buchlyvie on the night of 27th to 28th. On 31st a mild air-current from south-west was again established, and we may note that whilst at Edinburgh the highest day temperature on 29th was only 24°, it was 48° on 31st.

The mean rainfall was 3·67 inches, or 11 per cent. below the normal, but the general distribution was very irregular. Some western districts had a slight excess, whilst in eastern districts and as far north as Dunrobin there was, as a rule, a decided shortage. Aberdeen, however, had an excess of as much as 60 per cent. From 3rd to 22nd rain fell on every day at some western places, with some heavy amounts between 5th and 9th, Fort-William registering 1·51 inch on 5th, 1·83 inch on 7th, and 1·04 inch on 9th. On 11th Deerness had almost $1\frac{3}{4}$ inch, and Lochbuie more than 1 inch on 12th and on 21st. From 26th onwards precipitation took the form of snow, and, with heavy drifting, registration became a matter of difficulty. It appears certain, however, that towards the south-east the actual fall was but slight, whilst at Aberdeen the rainfall-equivalent on 26th was about $1\frac{1}{4}$ inch and on 27th nearly 1 inch. During the month there was at Leith only one day with a fall of more than one-tenth of an inch, and towards the south-east generally the month's totals were only from 20 to 30 per cent. of the average.

Gales were experienced between 7th and 12th, whilst from 26th to 30th weather of a very wintry type prevailed, a severe snowstorm becoming general on 27th. With strong winds from south-east and east the storm was of the nature of a blizzard, and for a day or two

extensive snowdrifts completely disorganised the railway service in several districts. On 31st the snow had largely disappeared. Thunderstorms occurred in Shetland on 6th, 9th, and 31st; in Orkney on 6th and 15th; at Fort-William on 9th and 13th; at Colmonell on 14th; and at Tillypronie on 31st. Coast fog in east early in the month, and all round the coast except to north-west between 27th and 29th. Sunshine varied in amount. Edinburgh had a slight excess, but Aberdeen only half its average. Auroras observed at Baltasound on 18th, 26th, and 31st.

I have the honour to be,

SIR,

Your most obedient Servant,

JAMES C. DUNLOP.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.
EDINBURGH, 16*th May*, 1910.

THE DECLINE OF THE BIRTH-RATE.

By ALEXANDER M'KINLAY, Clerk, Statistical Department.

In the Reports issued annually by this Department it has been clearly shown that during the last 30 years the Scottish birth-rate has markedly declined, and it has also been shown that the average age at marriage has increased. The object of the present study is to ascertain whether the former fact is due to the operation of the latter, and, if so, to what extent.

The methods by which the birth-rate is measured may be enumerated. The usual method is by a ratio which states how many births occurred in each 1000 of the total population, this being known as the crude birth-rate. In Scotland this rate declined from 35·621 per thousand in 1876, the year in which it reached its highest point, to 27·216 in 1908, in which year, with the exception of 1907, it touched its lowest point. If we exclude illegitimate births, and compare the legitimate births only in the same way, we have the crude legitimate birth-rate. This rate declined from 32·517 per thousand in 1876 to 25·329 in 1908. As, however, the proportion of married women to the total population is not constant, allowance must be made for fluctuations in the numbers of the former, and the legitimate births may be further measured by the ratio which they bear to the total number of married women of child-bearing age, that period being generally taken as 15–45 years, but sometimes as 15–50 years. Birth-rates estimated on this basis (the age-period selected being 15–45 years) have for several years been given in these Reports (*vide* Table 6), and in the Fiftieth Detailed Report a chart was given showing this birth-rate for each year from 1855 to 1904. This rate declined from 328 per thousand in 1876 to 250 in 1908. While this method makes allowance for the increased age at marriage, so far as the consequent shortening of the child-bearing period is concerned, it ignores another aspect of delayed marriage. The work of Dr. Matthews Duncan,[1] J. Körösi,[2] T. A. Coghlan,[3] Dr. Lewis,[4] and others has shown that the fertility of women is not constant during the child-bearing period, being higher in the earlier than in the later years. By delayed marriage a portion of the more fertile period of marriage is lost, so that not only is the period of child-bearing shortened, but the period remaining is of a lower fertility than the period lost. It is obvious, then, that married women have to-day an age higher and a fertility-rate lower than that possessed by married women a generation ago. The present paper is an attempt to eliminate this factor in the decline of the birth-rate.

The object of this paper is to ascertain the variations from some standard of birth-rates so corrected. The standard selected has been that given by Dr. Lewis. His work embodies the results of a study of the Scottish birth registers for the year 1855, the first year of compulsory registration in Scotland. The birth registers for that year possess what is, for any part of the United Kingdom, a unique value. In that year the birth schedule contained, in addition to the usual

particulars, the ages of the parents of the children, and the numbers of children born to them previously. In 1866 Dr. Matthews Duncan published a study of the registers of that year for Glasgow and Edinburgh, but in 1906 the corresponding registers for the whole of Scotland were brought under review in the former work. It gives the fecundity rates, representing the probability of a birth occurring within one year, for married women at quinquennial age-periods, and these rates, corrected to allow for multiple births, are the rates used in this study. Rates for other countries are available, but it would naturally be thought that Scottish birth-rates are rather more suitable than those derived from foreign countries, even although the ascertained results would probably be in close agreement. On the other hand, it must be remembered that the birth-rates quoted for 1855 are probably not a full representation of the true birth-rate for that year. Owing to the difficulties attending the establishment of a new system of compulsory registration, it is probable that many births escaped registration, the total deficiency from all causes amounting to possibly 8 per cent. As there is no reason to doubt that the births registered are a fair sample of all the births, the rates probably show with accuracy the balance between the birth-rate at the several age-periods, which is the factor essential for this enquiry. To test the value of Lewis' standard for this purpose, the "General Average" rates given by Körösi, based on the rates for several countries, have also been applied, but the variations of results have been so small as to warrant confidence in the standard used. The maximum difference of the variations has been only about 0·5 per cent.

The methods used for giving their proper weight to these birth-rates may now be described, an example being worked out in full.

Method of Obtaining Comparative Natality Figure for Glasgow, 1901.

Ages.	Number of Married Women. (Census 1901.)	Fecundity Rate per cent. (Lewis).	Expected Births. Col. 2 × Col. 3 / 100.
15–19	843	51·12	431
20–24	11,120	42·70	4,748
25–29	20,485	36·60	7,498
30–34	20,343	30·24	6,152
35–39	18,555	24·20	4,490
40–44	15,735	11·33	1,783
45–49	12,398	1·81	224
Total, ...			25,326
For Correction for Plural, etc., Births, multiply by ..			1·012
Total Expected Number of Legitimate Births, ..			25,630
Actual Number of Legitimate Births Registered,			22,676

$$\text{Legitimate Births Registered per 1000 Births Expected} = \frac{22676 \times 1000}{25,630}$$

$$= 885, \text{ Comparative Natality Figure.}$$

From the number of married women found at each Census and their age distribution, estimates of the numbers of married women at each

age-period for the inter-Censal years have been made, the method employed being a slight modification of that devised by Mr. A. C. Waters.[5] Since 1901 the proportion of married women at each age to the total female population, estimated in the usual way, has been assumed to be constant. These estimates having been made, to them were applied the selected fecundity rates and a correction added for multiple births, and in this way an estimate was made of the total number of legitimate births which might reasonably be expected from a population containing married women of such age-constitution. The next step was to compare these births with the births actually registered in that year, expressing the results as the ratio of births registered to 1000 expected births. This ratio may be termed the "Comparative Natality."

For the Burghs and Counties the rates have been calculated for the Census years only, and the populations used have been those given in the Census reports, the only corrections made being a few adjustments where the area for which statistics of age and conjugal condition were available did not exactly coincide with the registration area. In such cases it has been assumed that the distribution of population in those respects was similar in the registration area to that found in the other. The greatest of those divergencies has been that shown between the Civil and the Registration County of Argyll at the last two Censuses.

Papers have been previously published on this subject in the United Kingdom. Drs. Newsholme and Stevenson [6] have estimated the decline of the birth-rate, more especially for the component parts of England and Wales, between the years 1881 and 1901-1903. On comparing the methods employed by them with those used in the present paper, it is ascertained that in principle they are the same, differing only in details. The standard used by them, however, is that derived from the Swedish birth registers for the year 1891, and, as already stated, they compare only two years. Although they give the rates for Scotland, the divisions of Scotland, and the burghs of Glasgow, Edinburgh, Dundee, and Aberdeen, the only exact duplication of calculations between that paper and this is that for the whole of Scotland from 1881 to 1902. The decline, as estimated by them, is about 0·3 per cent. less than the decline given in this paper, those rates being 13·2 and 13·5 per cent. respectively.

Corrected birth-rates for England and Wales for the last six Census years have been calculated by Mr. G. Udny Yule, who has also estimated the decline shown between the years 1871 and 1901 in some of the London Registration Districts. The standard used by him has been that given by Matthews Duncan, with the law deduced therefrom by Professor Tait to the effect that "the percentage of wives of any one age who are mothers within one year varies directly as the difference between that age and 50." On examination it is discovered that this law does not apply so strictly to the rates for the whole of Scotland as given by Dr. Lewis.

A Table (A) is submitted below, showing the birth-rates for the last five Census years, estimated by the four methods enumerated above. The Census years have been selected in order to give the greatest accuracy, and the decline is further shown by comparing subsequent rates with that for 1861, that rate being represented as 1000, and also by calculating the percentage decline for each

decennial period. It will be observed that from any of the first three methods conclusions might be drawn which a study of the fourth would show to be somewhat inaccurate.

The crude birth-rate shows an increasing decline, amounting in all to 15·4 per cent., that decline being specially marked in the eighties; but on examination of the second method it is seen that the decline throughout, with the exception of the first decade, would have been less pronounced but for a decrease in the number of illegitimate births. The second method also shows the decline to be greatest in the eighties. The declines shown by this method, with the exception of that in the sixties, are less than those shown by the crude birth-rate, amounting in all to 12·7 per cent., but, generally speaking, the decline follows the same lines. The third method shows that the abnormal decline shown in the eighties by the first two methods was really to a great extent due to the low marriage-rates for the years preceding the Census of 1891, with the consequent diminution in the numbers of married women, for the decline by this method shown for that decade, while greater than that for the preceding decade, is less than that for the decade following. By this method the decline throughout shows a steady increase, the total decline being 14·9 per cent. The fourth method shows a decline from 1861 to 1901 not so great as when measured by the crude birth-rate, or by the rate based on the numbers of married women of child-bearing age, being 13·4 per cent., but the manner in which this rate has declined is remarkable for the acceleration of that decline in the second two decades as compared with the first two, and especially in the fourth as compared with those shown in the preceding decades. The first decade showed a slight rise, and the second a small decline, but the third showed a large decline, though not so great as that shown by the other methods, and the fourth showed a decline greater than that calculated by any of the other methods. In the first twenty years the decline was 0·9 per cent.; in the second twenty years the decline was 12·6 per cent. While this result is very similar to that shown by the third method, the acceleration of the decline in the fourth decade is very much more marked.

During the first decade the greatest decline was that shown by the second method, the declines being all accounted for by alterations in the numbers and age distribution of the married women, for the comparative natality shows a slight increase. In the second decade the greatest decline is that shown by the first method, due partly, as has been said before, to the decreasing number of illegitimate births, but the decline is in this case a general one, ranging from 0·9 to 1·3 per cent. by the other methods. In the third decade, the decline is again greatest by the first method, and is only to a small extent due to the decrease in the number of illegitimate births. The decline is again a general one, the percentage of decline ranging from 3·5 by the fourth method to 6·8 by the second. Had this enquiry stopped at 1891, it would have appeared that about one-sixth of the total decline shown by the first method was due to the decreasing number of illegitimate births, that about one-fourth of the decline shown by the second was due to the numbers of married women of child-bearing age having diminished, and that one-half of it was due to the increased age of such women at

marriage. In the same way, about one-third of the decline shown by the third method was due to the alterations of the ages of married women. The correction, in fact, shows that the decline of fertility was not in 1891 so great as would appear at first sight. This conclusion, however, cannot be drawn from the figures for 1901. From 1891 to 1901 the decline in the comparative natality is very much greater than that shown by either of the first two methods. The decline per cent. of the crude rate is 5·5, of the crude legitimate rate 4·2, of the rate per thousand married women of child-bearing age 8·6, and of the comparative natality 9·4. The result of measuring the decline by the last-mentioned method is that the decline of the crude legitimate birth-rate can no longer be explained by the alteration of the numbers and age-constitution of married women. The total decline in the crude birth-rate since 1861 has been 15·4 per cent. The total decline in the crude legitimate birth-rate has been 12·7 per cent. It would therefore appear that the decline of the crude rate, to the extent of about one-sixth, is due to the decreasing number of illegitimate births. The decline of the birth-rate per thousand married women of child-bearing age has been 14·9 per cent., being greater than that of the crude legitimate birth-rate. It follows that the decline of the latter rate is not in any way to be accounted for by any alteration in the numbers of married women of child-bearing age, since the decline is greater when allowance is made for any such change. The comparative natality figure, which makes allowance for this factor and also for the increase in the average age of married women, shows a decline of 13·4 per cent. The inference to be drawn is that the decline in the rate per thousand married women of child-bearing age is, to the extent of about one-tenth, due to that increased age. This, however, is insufficient to explain the diminution in the crude legitimate birth-rate. Had the comparative natality remained as in 1861, the crude legitimate rate, instead of showing in 1901 a decline of 12·7 per cent., would have shown an increase of about 0·9 per cent., and the number of legitimate births registered would have been nearly 20,000 more than were actually registered. It must be pointed out that the decreases here shown are not the extreme decreases, as neither highest nor lowest rates happen to have occurred in years in which a Census was taken.

To illustrate the decline of the corrected birth-rate, a chart has been prepared, and is submitted herewith, showing the variations of the comparative natality for each year from 1855 to 1908. In this chart the line at 1000 represents the standard for the year 1855. As correct inter-Censal populations are not available, and as the marriage-rate should exercise a powerful influence on the birth-rate, the value of the comparative natality diminishes as a Census becomes more remote. In order to indicate the nature of the variations which might be expected, the variations of the marriage-rate have also been included. The mean marriage-rate for the period 1855 to 1909 has been calculated, and the variations of the marriage-rate from that mean are shown. The crude legitimate birth-rate for the period 1855 to 1908 has also been calculated, and the variations of the legitimate birth-rate from that mean are also shown. In each case the standard is given as 1000. The rise in the comparative natality graph to the year 1856 illustrates the deficiency of the number of births regis-

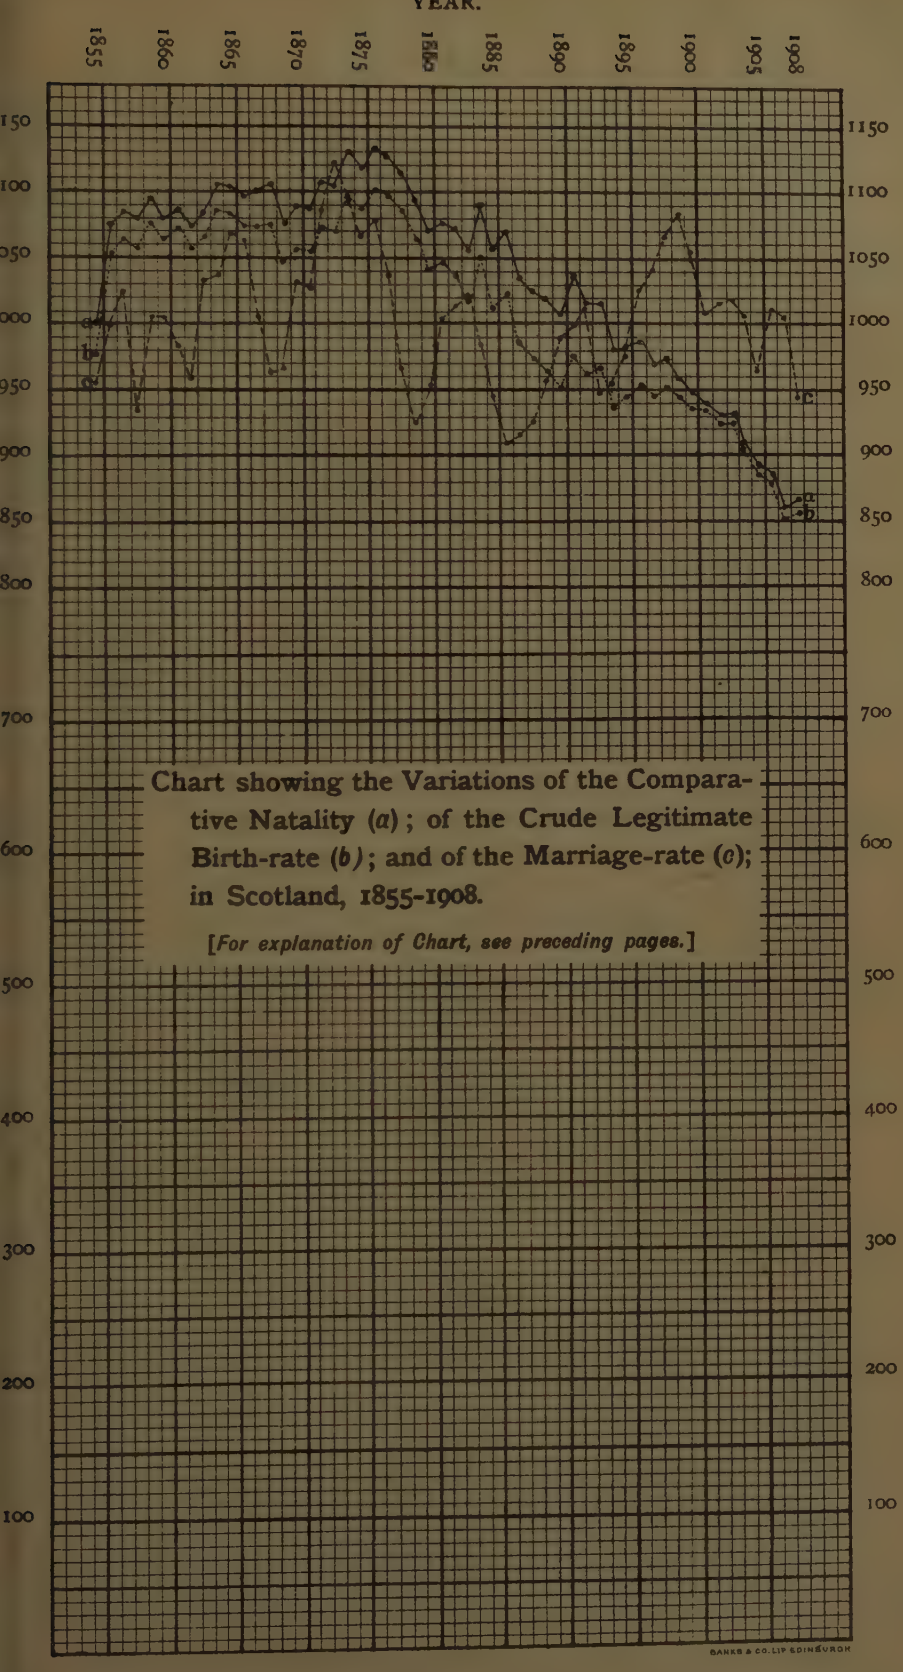

Chart showing the Variations of the Comparative Natality (*a*); of the Crude Legitimate Birth-rate (*b*); and of the Marriage-rate (*c*); in Scotland, 1855-1908.

[For explanation of Chart, see preceding pages.]

tered in 1855, a fact to which reference has already been made. From that year to 1876 the tendency may be described as one of irregular rise, the culminating point being reached in the latter year. From 1876 to 1891 there is a considerable fall, checked to some extent by the rises recorded in 1884 and 1891. From 1891 to 1908 there is a fall without any serious interruption. It must not be assumed that any rise or fall in individual years means necessarily a rise or fall in the actual natality. If exact statistics of population for those years were known, such tendencies for single years might be obliterated or reversed. The most important disturbing factor is the abnormal accessions to the numbers of married women during any time when the marriage-rate is high. As no inter-Censal corrections have been made to counteract this factor, corrections which at the best could only be rough, and as there are no statistics available for married women showing the losses by death and emigration, the relation between the natality and the marriage-rate is of considerable importance. In the absence of any such correction, the comparative natality, like the crude birth-rate, should rise and fall with the oscillations of the marriage-rate, though the comparative oscillations of the birth-rate should not be so extreme as those of the marriage-rate, and should lag behind by a year or two. In the period of rising rates, the general correspondence between the variations of the two rates is well marked. Three maximum periods of marriage-rates have as their counterpart three periods of high birth-rates. It may also be observed that as the three variations of the marriage-rate are on an ascending scale, so the excess of births is more apparent in the second than in the first, and more apparent in the third than in the second. The fall in the marriage-rate to 1879 is matched by the fall in the birth-rate to 1880 and 1883, and the period of rising marriage-rates has its counterpart in rises of the natality in 1884 and 1886, although the recovery seems somewhat sluggish. In view of the fact that the rise of the marriage-rate does not bring it very much above the mean, the rise in the birth-rate does not seem unsatisfactory in amount. The next lowest point in the natality graph is not reached until four years after the lowest point of the following depression of the marriage-rate, the latter point being reached in 1886. The marriage-rate again reached normal in 1891, and in that year a substantial increase in the natality is noted, although in the next year, when the marriage-rate increased to over normal, the natality declined. Following a short and not very deep depression in the former rate, that rate again rose to a maximum in 1899, when it reached the highest point recorded since 1855, with the exception of three rates recorded during 1872, 1873, and 1874. During this maximum period the marriage-rate for nine successive years was above the normal. For this great increase in marriages there is no corresponding increase at all in the natality, there being no increase to speak of in any year. A recovery in the marriage-rate in 1906 seems to be reflected in a slight rise of the natality in 1908. There thus seem to be three fairly well defined periods in the natality—the first, one of irregular rise to 1876, the second, one of irregular fall to 1891, and the third, one of steady fall to 1908. In the first period the correspondence with the marriage-rate seems close, in the second it is less apparent, in the third it scarcely seems to exist.

The graph showing the variations of the crude legitimate birth-rate displays characteristics at once similar and slightly diverse, the diversities permitting of explanation. The divergence between the two graphs increases towards 1871, contracts somewhat towards 1881, increases greatly towards 1891, and again contracts towards 1901, from which point the two graphs follow practically the same course. The explanation of the differences is to be found in the varying proportions of married women of the specified ages to the total population, a factor which the crude legitimate birth-rate ignores. If the crude birth-rate were steady over a series of years, despite fluctuations in the marriage-rate, the comparative natality, accurately ascertained, would fluctuate in opposition to the marriage-rate. For if the marriage-rate were to rise, the number of married women would show an increase also, and if this were not followed by an increase in the birth-rate, it would be due to some decrease in the natality, which would be shown accordingly. On the other hand, if the marriage-rate were to decline, with a consequent diminution in the number of married women, the crude birth-rate could be kept at the same level only by increased natality among the comparatively small married population. Conversely, if the comparative natality were constant, the crude legitimate birth-rate would follow the fluctuations of the marriage-rate, as, the comparative natality remaining constant, any increase of the married population would be followed by an increase in the crude birth-rate, and *vice versa*. The Census of 1891 followed on a period of low marriage-rates, though the marriage-rate was rising. Conditions were therefore unfavourable for a high birth-rate in that year. The actual birth-rate was, however, somewhat more favourable than might have been expected, the increase following fairly sharply the approach of the marriage-rate to the normal. Consequently, the comparative natality is high in comparison with the crude rate, as it allows for the marriage conditions, while the crude rate does not. On the other hand, the Census of 1901 followed a period of high marriage-rates, with a consequent constitution of the population favourable to a high birth-rate. The expectation of the latter not being fulfilled, the comparative natality declined relatively to the crude birth-rate, which ignores such conditions. As the alteration in age-constitution and conjugal condition is spread in each case over surrounding years, the divergence and concurrence are also spread over the decennial periods. The parallelism between the two rates after 1901 is accounted for by the fact that the age and conjugal conditions ascertained at the Census of 1901 have been retained for subsequent years, allowance being made only for the increase of the total female population. Without the correction of a following Census, it would be rash to assume, in view of the marriage conditions mentioned above, that the changes noted from 1891 to 1901 have continued. Had such an assumption been made, the decline in the comparative natality would have been still further accentuated, as the numbers of married women at the earlier ages would have shown a greater increase, which, having in view the comparatively low marriage-rates since 1901, and the high emigration figures in recent years, would seem unlikely. It should be pointed out that the year 1908 is seven years removed from a Census, whereas no year prior to 1901 was more than five years removed. Should the results of the next Census show that the female married population at the

specified ages has been over-estimated, the decline in the comparative natality rates shown would be modified.

Following on the observations noted above on the relations between the fluctuations of the three rates shown on the chart, it may be further pointed out that, if we assume a regular decline in the comparative natality, the crude legitimate birth-rate, in its variations from *the mean of its own course*, will follow the fluctuations of the marriage-rate. This tendency can be seen in the chart. The crude legitimate birth-rate exhibits four tendencies—the first, that of an irregular rise to 1876; the second, that of a rapid irregular fall to about 1890; the third, that of a very considerable slackening of the fall to 1903; and the fourth, that of a rapid and regular decline, of which the slight rise in 1908 can scarcely be called an interruption. If a line be drawn from the position occupied in 1876 to that occupied in 1908, the "peaks" of the marriage-rates about 1883 and 1892 are reflected in the variations of the crude birth-rate from this line, while the high marriage-rates about 1899, to which reference has already been made, are matched by the eleven consecutive birth-rates, beginning at 1896, all of which are above the line representing the normal tendency to decline. It will also be observed that, while the marriage "peaks" in 1883 and 1892 are of approximately the same height, the corresponding "peaks" in the birth-rate are respectively above and below the mean of the course of the birth-rate, while the rise corresponding to the third marriage "peak" was too much flattened to be called by that name. Even viewed from this modified standpoint, the response of the birth-rate to the marriage-rate seems to be declining. The only influence, therefore, which a high marriage-rate appears to have exerted in recent years is to minimise the decline of the crude birth-rate.

In the Eight Principal Towns the comparative natality has been calculated for the Census years only. The tendency observed in them is similar to that noted for the whole of Scotland, but the rates are distinctly lower. The later tendency to accelerate the decline is even more marked than is the case in all Scotland. The percentages of decline in the four successive decades, based on the rate for the preceding Census year, were 1·0, 1·5, 2·8, and 10·0. In the remainder of Scotland the comparative natality is always at least 100 per thousand above the corresponding rates for the Eight Towns, but the declining tendency is somewhat similar. An increase of 1·4 per cent. in the first decade is followed by decreases of 1·1, 3·8, and 8·7. While the total decline since 1861 has been 13·4 per cent. in all Scotland, in the Eight Towns it has been 14·7, and in the remainder of Scotland 12·0. The acceleration in the rate of decline, though striking, is not so marked as in Scotland and in the Eight Towns.

Considering the Eight Towns in detail, it may be noted that, while following the general line of decline, the fall in Glasgow in the last decade is the lowest for any of the towns. Edinburgh exhibits a remarkable decline. Having a comparatively small number of married women of child-bearing age, it is not favourably constituted for a high birth-rate, but the results show that the decline is not entirely due to this factor. In 1871 its rate was substantially above that for Glasgow, being above the average for the Eight Towns, but in the last decade the rate declined by 140 to 787, the lowest for any of the Eight

Towns. Aberdeen and Perth both show an increasing rate up to 1891, with a fall of more than average extent thereafter. Perth shows a fall even greater than that of Edinburgh. It is the only one of the Eight Towns which has never reached the standard. Paisley shows high rates up to 1891, and even the rapid fall thereafter leaves its rate the highest for any of the Eight Towns. Its rate of 1129 for 1871 is noteworthy.

Nine counties have been selected for similar treatment. Stirling and Linlithgow are both counties with high crude birth-rates, Argyll and Selkirk are both counties with low crude birth-rates, while Orkney, Sutherland, Banff, Haddington, and Wigtown have been selected to make the counties more representative. The leading general feature of the results is that the comparative natality for those counties is higher than that for the Burghs and for all Scotland. Sutherland represents the highest rate of any county for which calculations were made, being even in 1901 higher than the standard by as much as 213 per thousand. In 1891, however, the excess was 324. The rate for Linlithgow comes next to that for Sutherland. It shows a very large rise, a large fall, a considerable rise, and a very large fall for the four decades in question. The rate was in 1901 still 93 over the standard. Banff and Stirling come next, having rates still rather above the standard. Argyll and Haddington exhibit the usual features, except for a large decrease in each during the third decade, and, on the part of the latter, a fall in the fourth decade the least observed in any of the counties for that period. Wigtown shows a very large decline in the last decade. Orkney has characteristics of an average character, but Selkirk has by far the largest decline calculated. An alteration of boundaries between the years 1861 and 1871 makes the comparison between the figures for those years a little unreliable, but the second decade showed a fall quite without an equal among the rates calculated, even those for the fourth decade, with the exception of the further decline for the same county in that decade, when the rate fell from 974 to 721—a rate considerably below that for the City of Edinburgh, and in striking contrast to that for the County of Sutherland, which was 1213. It must be pointed out that, as only what seemed representative counties are taken into account in the calculations dealt with in this paragraph, it must not be assumed that the changes here noted are necessarily the most marked of any that took place in the counties of Scotland.

In conclusion, the following may be said to be the general deductions which may be drawn from this study:—

(1) That the decline of the birth-rate is to some extent due to the decreasing number of illegitimate births;

(2) That the decline of the legitimate birth-rate is not due to the alteration in the numbers of married women of child-bearing age;

(3) That the decline of the rate based on those numbers is only to a small extent due to the increased age of women at marriage;

(4) That it is therefore almost entirely due to a declining fertility of marriage;

(5) That this declining fertility of marriage is more marked in urban than in rural districts;

(6) That during recent years the variations of the marriage-rate have had less influence on the birth-rate than was the case in earlier years.

TABLE **39a.**—Deaths from POISON in Scotland, 1908, specifying Poison used.

ACCIDENTAL POISONING.

	Males.	Females.
Opium and its preparations,	18	9
Coal Gas,	8	2
Carbolic Acid,	7	2
Narcotic Poisoning,	2	2
Carbonic Oxide,	3	1
Chloroform,	2	1
Mercury and its salts,	2	1
Ammonia,	2	–
Chloral Hydrate,	2	–
Alcohol,	–	2
Strychnine,	1	1
Irritant Poisoning,	1	1
Hydrocyanic Acid,	1	–
Carbonic Acid Gas,	1	–
Nitric Acid,	1	–
Cocaine,	1	–
Veronal,	1	–
Oxalic Acid,	1	–
Hemlock,	1	–
Hydrochloric Acid,	–	1
Trional,	–	1
Chloral and Opium,	–	1
Poisonous Gases,	1	–
Not stated,	2	–
Total,	58	25

SUICIDAL POISONING.

Carbolic Acid,	2	3
Opium and its preparations,	3	1
Coal Gas,	2	1
Oxalic Acid,	2	–
Ammonia,	–	2
Chloroform,	1	–
Strychnine,	1	–
Cyanide of Potassium,	1	–
Rat Poison,	1	–
Irritant Poison,	1	–
Hydrochloric Acid,	–	1
Nitric Acid,	–	1
Not stated,	2	1
Total,	16	10

DEATHS UNDER ANÆSTHETICS.

Chloroform,	10	12
Ether,	–	1
Chloroform and Ether,	–	1
Stovaine,	1	–
Not stated,	9	2
Total,	20	16

TABLE **40.**—NUMBER of DEATHS from CERTIFIED and from UNCERTIFIED CAUSES, with the Proportion of the Uncertified to the Total Deaths in Scotland, its Groups of Districts, Divisions, Counties, and Principal Towns in 1908, with the corresponding Proportion for 1907, and for the Mean of the Five Years 1903–1907.

N.B.—Districts containing Parliamentary and Royal Burghs are printed in capitals, thus :—EDINBURGH. Districts c
taining Police Burghs or Towns of 2000 Inhabitants and upwards are printed in small capitals, thus :—Carluke.
An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situated
which comprise more, or parts of more, than one Parish. The component parts of these Districts will be found at page 58
A dagger "†" is prefixed to those Districts which consist of only a part of the Civil Parish of the same name.

Ovarian Tumour (not Malignant)	1	–	–	–	–	–	–	–	1	1	–	–	–	–	–
Other Diseases of Ovary	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Uterine Tumour (not Malignant)	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Other Dis. of Uterus and Vagina	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Disorders of Menstruation	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Other Diseases of Generative and Mammary Organs	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
DISEASES OF PREGNANCY AND CHILDBIRTH.															
Abortion, Miscarriage	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Puerperal Mania	–	1	–	–	–	–	–	–	–	–	–	–	–	–	–
Puerperal Convulsions	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Placenta Prævia, Flooding	–	1	–	–	–	–	–	–	–	–	–	–	–	–	–
Other Accidents of Pregnancy and Childbirth	3	–	–	–	–	–	–	–	–	–	–	–	–	–	–
DISEASES OF LOCOMOTOR SYSTEM.															
Caries, Necrosis	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Arthritis, Periostitis	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Other Dis. of Locomotor System	–	–	–	–	–	–	–	–	1	1	–	–	–	–	–
DISEASES OF THE SKIN.															
Ulcer, Bedsore	–	–	–	–	–	–	–	–	1	–	–	–	–	–	–
Eczema	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Pemphigus	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Other Diseases of the Skin	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
C.—OTHER SPECIFIED DISEASES	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
D.—CAUSES ILL-DEFINED OR NOT SPECIFIED.															
Atrophy, Debility	–	–	–	–	–	–	[illegible]	–	–	–	[illegible]	–	–	–	–
Old Age	–	–	–	–	–	2	4	16	34	53	31	15	8	1	–
Dropsy, Ascites, Anasarca	–	–	–	–	–	–	[illegible]	2	–	2	–	–	–	–	–
Tumour	–	–	–	–	–	–	1	–	–	–	–	–	–	–	–
Abscess	–	–	–	–	–	–	[illegible]	–	–	–	–	–	–	–	–
Hæmorrhage	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Sudden Death (cause unascertained)	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Other ill-defined causes	–	–	–	–	–	–	–	1	–	–	–	–	–	–	–
Causes not specified	1	–	–	–	–	2	4	5	7	–	–	–	–	–	–
E.—VIOLENT DEATHS.															
In Mines and Quarries	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Vehicles and Horses	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Ships, Boats, Docks (not Drowning)	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Building Operations	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Machinery	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Weapons and Implements	–	–	–	–	–	–	–	–	–	–	1	–	–	–	–
Burns and Scalds	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Poisons, Poisonous Vapours	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Drowning	–	–	–	1	1	–	–	–	1	–	–	–	–	–	–
Suffocation { From Overlaying	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Suffocation { Otherwise	–	–	–	–	–	–	–	1	–	–	–	–	–	–	–
Falls	–	–	–	–	–	–	–	–	–	–	–	1	–	–	–
Weather Agencies	–	–	–	–	1	–	–	1	1	–	–	–	–	–	–
Otherwise, or not stated	–	–	–	–	–	–	–	1	1	1	2	–	–	–	–
Homicide	–	–	–	–	–	–	1	–	–	–	–	–	–	–	–
Suicide	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–
Execution	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLE BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
	2. Orkney.	
13	Birsay	Part of Harray and Birsay.
14	Deerness	Part of St Andrews and Deerness.
18	Harray	Part of Harray and Birsay.
22	North Ronaldshay	Part of Cross and Burness.
25	St Andrews	Part of St Andrews and Deerness.
26	Sanday	Lady, and part of Cross and Burness.
	3. Caithness.	
37*b*	Keiss	Parts of Canisbay and Wick.
	5. Ross and Cromarty.	
58	Applecross	(1) Part of Applecross; (2) Remainder of Applecross and part of Gairloch.
59*b*	Carnoch	Parts of Contin and Urray.
86*b*	Carloway	Parts of Barvas and Uig.
87	Lochs	Lochs, and part of Uig.
	6. Inverness.	
92*b*	Cannich	Parts of Kilmorack and Kiltarlity.
112	Kilmuir	(1) Part of Kilmuir; (2) Remainder of Kilmuir, and part of Snizort.
	8. Elgin.	
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbryde.
	9. Banff.	
152	Enzie	Parts of Bellie and Rathven.
155*b*	Glenrinnes	Parts of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
	10. Aberdeen.	
171*b*	Ardallie	Parts of Cruden, Ellon, Longside, and Old Deer.
210*b*	Kininmonth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick.
222*b*	Millbrex	Parts of Fyvie and Monquhitter.
227*b*	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
231	Peterculter	(1) Parts of Aberdeen and Peterculter; (2) Remainder of Peterculter.
237*b*	Savoch	Parts of Ellon, New Deer, Old Deer. and Tarves.
249*b*	Ythan Wells	Parts of Auchterless and Forgue.
	11. Kincardine.	
266	Nigg	Nigg, and part of Aberdeen.
	12. Forfar.	
282	Dundee	Dundee Combination, and part of Mains and Strathmartine.
294*b*	Kilry	Parts of Glenisla and Lintrathen.
	13. Perth.	
324	Aberfeldy	Parts of Dull, Kenmore, and Logierait.
330	Auchtergaven	Parts of Auchtergaven and Logiealmond.
331	Balquhidder	Balquhidder, and part of Comrie.
344	Dowally	Part of Dunkeld and Dowally.
349	Dunkeld	Part of Dunkeld and Dowally.
355*b*	Foss	Parts of Blair-Athol and Dull.
361	Killin	Parts of Kenmore and Killin.
375	Logiealmond	Parts of Logiealmond, Little Dunkeld, and Methven.
379	Meigle	Meigle, and part of Coupar-Angus.
386*b*	Persie	Parts of Alyth, Blairgowrie, and Kirkmichael.
387	Perth	Perth, and part of Kinnoull.
393*b*	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394*b*	Strathfillan	Part of Killin.
394*c*	Tenandry	Parts of Blair-Athol and Moulin.
	14. Fife.	
402	Anstruther-Easter	Anstruther-Easter, and part of Kilrenny.
417	Crail	Part of Crail, and May Island.
423	Dunbog	Dunbog, and part of Flisk.
425	Dunino	Dunino, and part of Crail.
442	Kirkcaldy and Abbotshall	Part of Kirkcaldy and Dysart.
457*b*	Thornton	Part of Kirkcaldy and Dysart and of Markinch.
	17. Stirling.	
473	Bonnybridge	Parts of Denny, Dunipace, and Falkirk.
488	St. Ninians	Parts of St. Ninians and Stirling.
490	Stirling	Parts of St. Ninians and Stirling.

CONSTITUTION OF THE DISTRICTS—*continued.*

No.	Districts.	Component Parts (Parishes).
	18. Dumbarton.	
496	Dumbarton	Dumbarton, and parts of Cardross and Old Kilpatrick.
	19. Argyll.	
504	Ardchattan	Part of Ardchattan and Muckairn.
505	Ardnamurchan	(1) Parts of Ardnamurchan and of Arisaig and Moidart.
506	Ballachulish, etc.	Parts of Kilmallie and Ardgour.
509	Cumlodden and Minard	Parts of Glassary and Inveraray.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan, etc.	(1) Parts of Kilchrenan and Dalavich, and Glenorchy and Inishail; (2) Remainder of Kilchrenan and Dalavich.
520	Kilmallie	Parts of Kilmallie and Ardgour.
525	Lismore	Lismore and Appin, and part of Ardgour.
526	Lochgilphead	Parts of Glassary and South Knapdale.
529	Muckairn	Parts of Ardchattan and Muckairn, and Glenorchy and Inishail.
535	Tarbert	Parts of Kilcalmonell, Saddell and Skipness, and South Knapdale.
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelvie	Part of Pennygown and Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and Pennygown and Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
550	Torosay	Part of Pennygown and Torosay.
	20. Bute.	
556	Lochranza	Parts of Kilbride and Kilmory.
	21. Renfrew.	
559*b*	Bridge-of-Weir	Parts of Houston and Killellan, and of Kilbarchan.
572	Neilston	(1) Part of Neilston; (2) Remainder of Neilston, and part of Paisley
	22. Ayr.	
576	Ardrossan	(1) Parts of Ardrossan and West Kilbride; (2) Remainder of Ardrossan.
578	Ayr (Alloway)	Parts of Ayr and Maybole.
584*b*	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
603	Loudoun (Darvel)	Parts of Loudoun and Galston.

Cranshaws, 734
Cranston, . 680
Crathie, . 183
Crawford, . 635

* The actual number of Districts is 1078—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 7 and 18 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place *compound* names in the order in which they are pronounced.
